

Drug-eluting beads (DEB-TACE)

Hyo-Cheol Kim, M.D.

angiointervention@gmail.com

Clinical Associate Professor

Department of Radiology

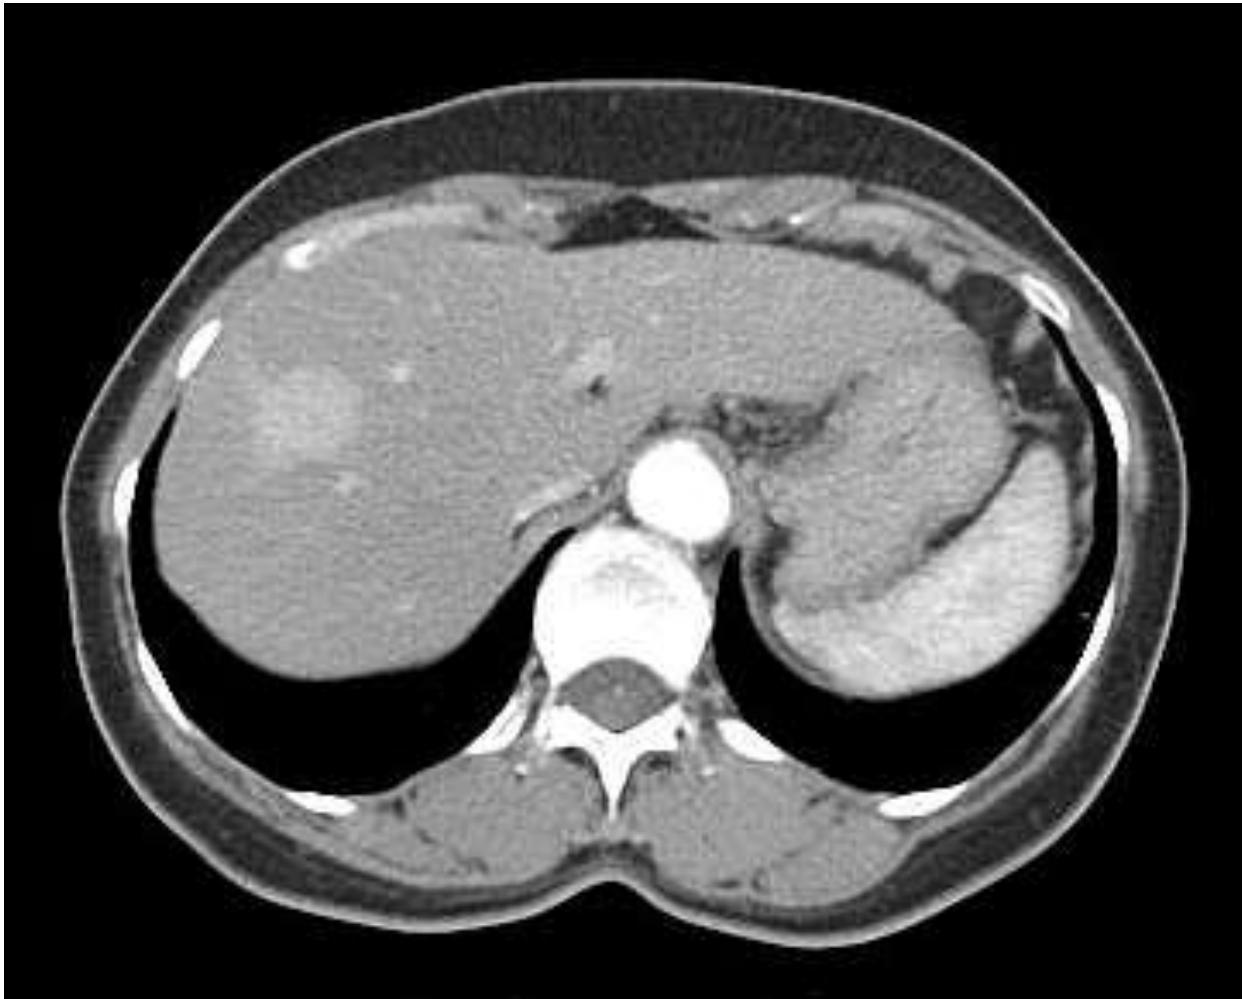

Seoul National University Hospital

Contents

- Drug-eluting beads
 - DC bead (BTG)
 - Hepasphere (Merit Medical)
- DC bead
 - Characteristics (DC bead vs Lipiodol)
 - Technical difference (DC bead vs Lipiodol)
 - Clinical outcome (DEB-TACE vs cTACE)
 - Indication (DEB-TACE vs cTACE)

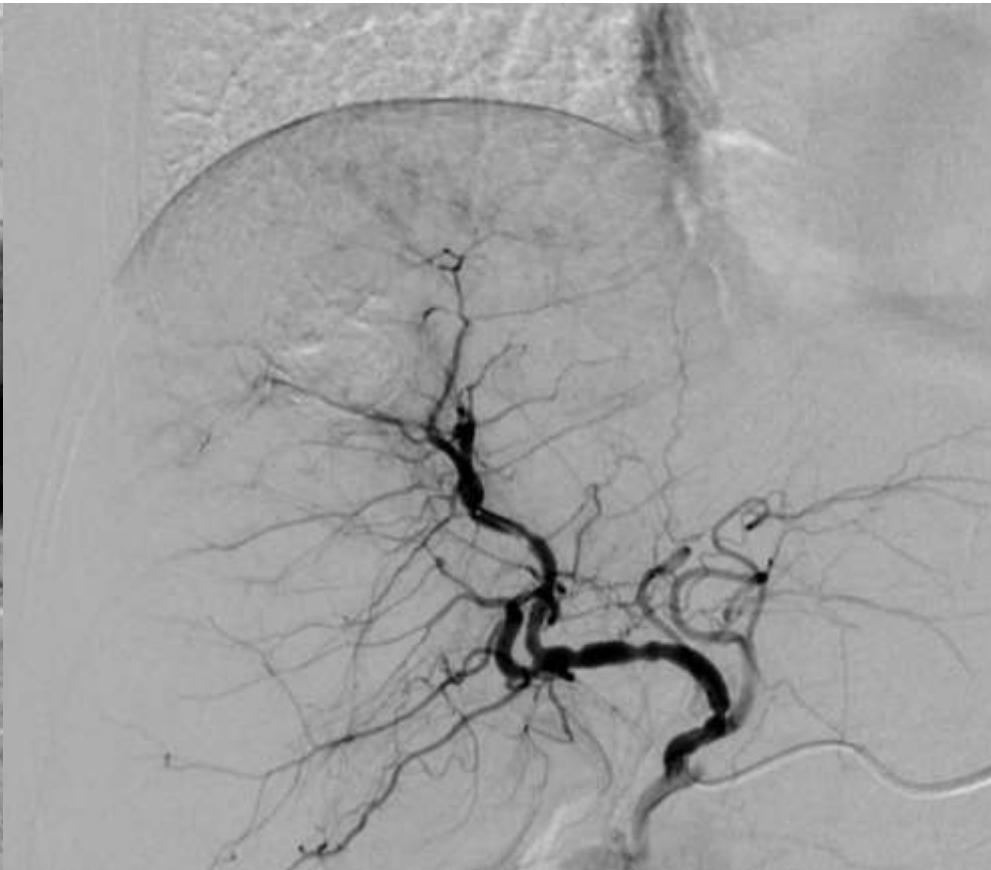

Small tumor \leq 3cm

Small tumor \leq 3cm

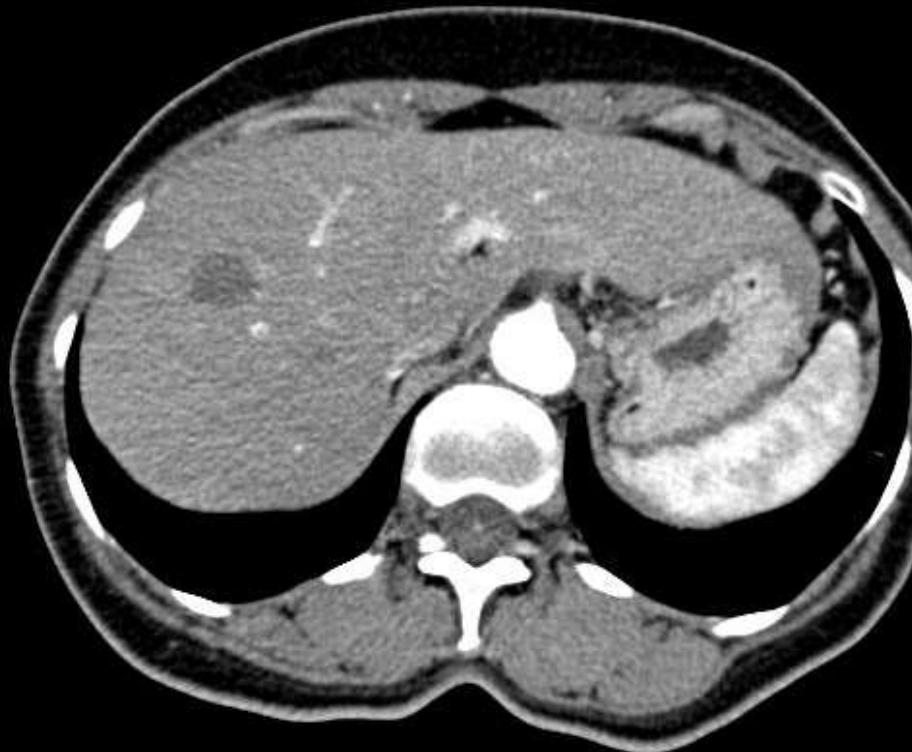

Before DEB-TACE

After DEB-TACE (100-300)

Small tumor \leq 3cm

1 month

13 months

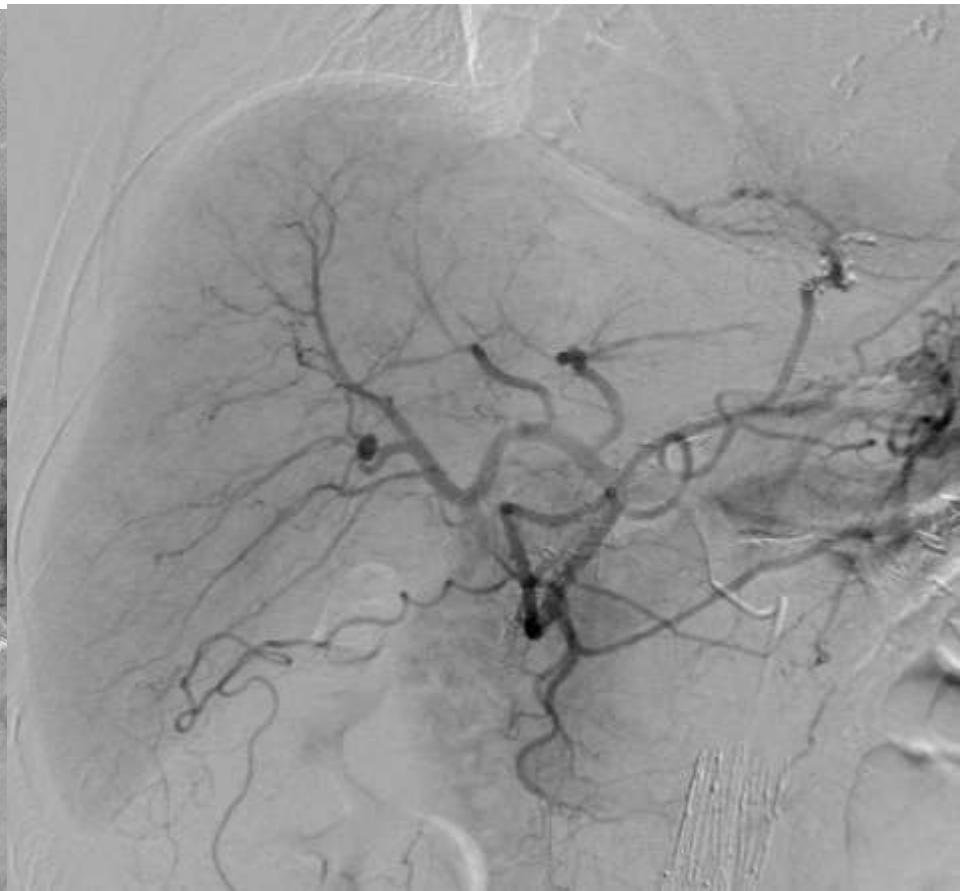

Small tumor \leq 3cm

Small tumor \leq 3cm

Before DEB-TACE

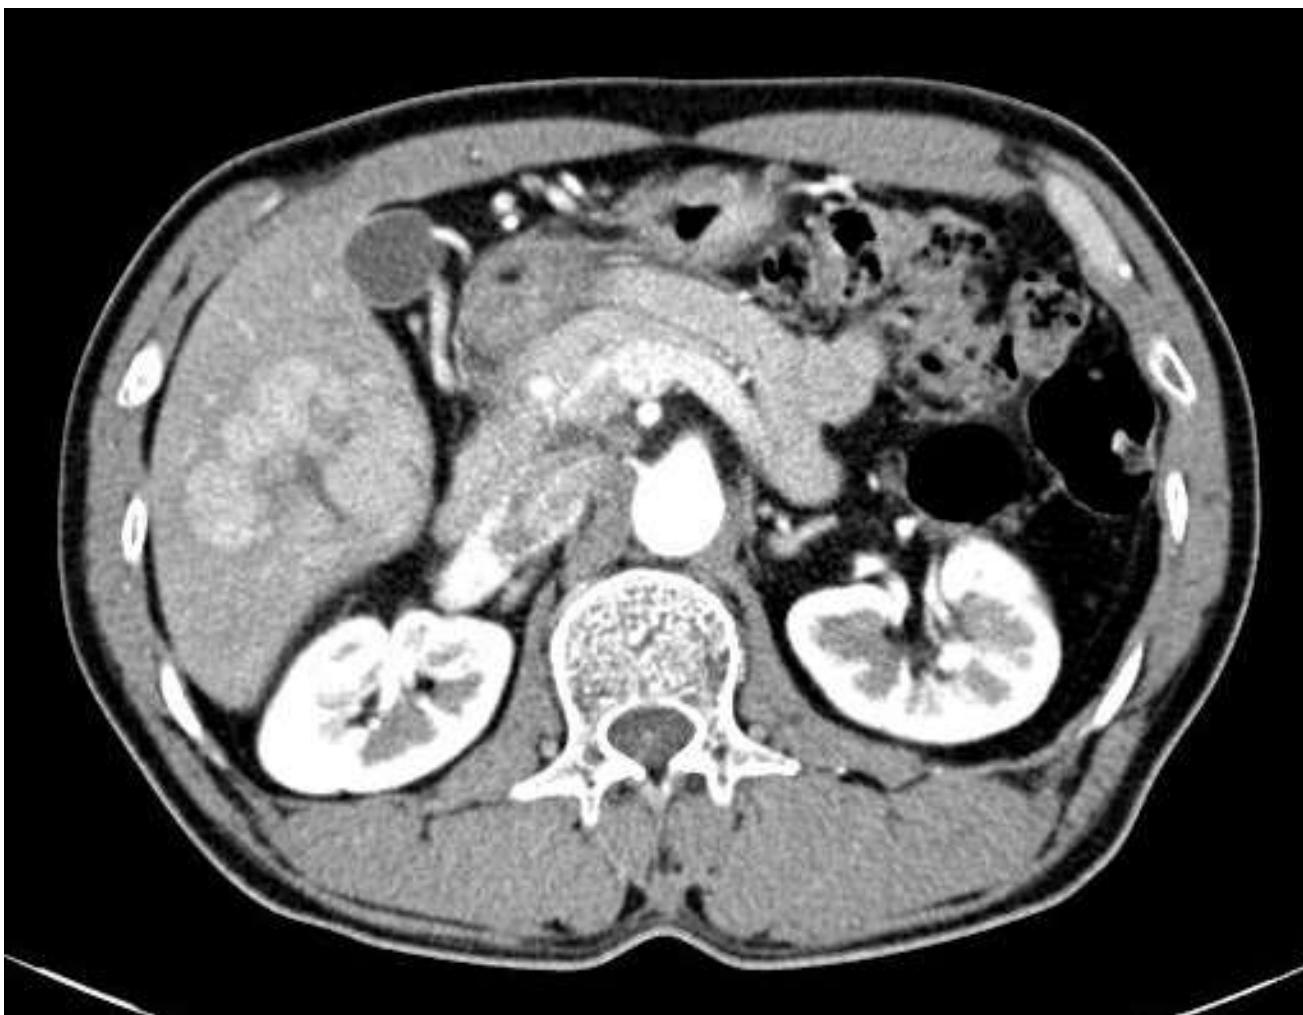

After DEB-TACE (100-300)

Small tumor \leq 3cm

1 month

Medium tumor 3cm ~ 7cm

Medium tumor 3cm ~ 7cm

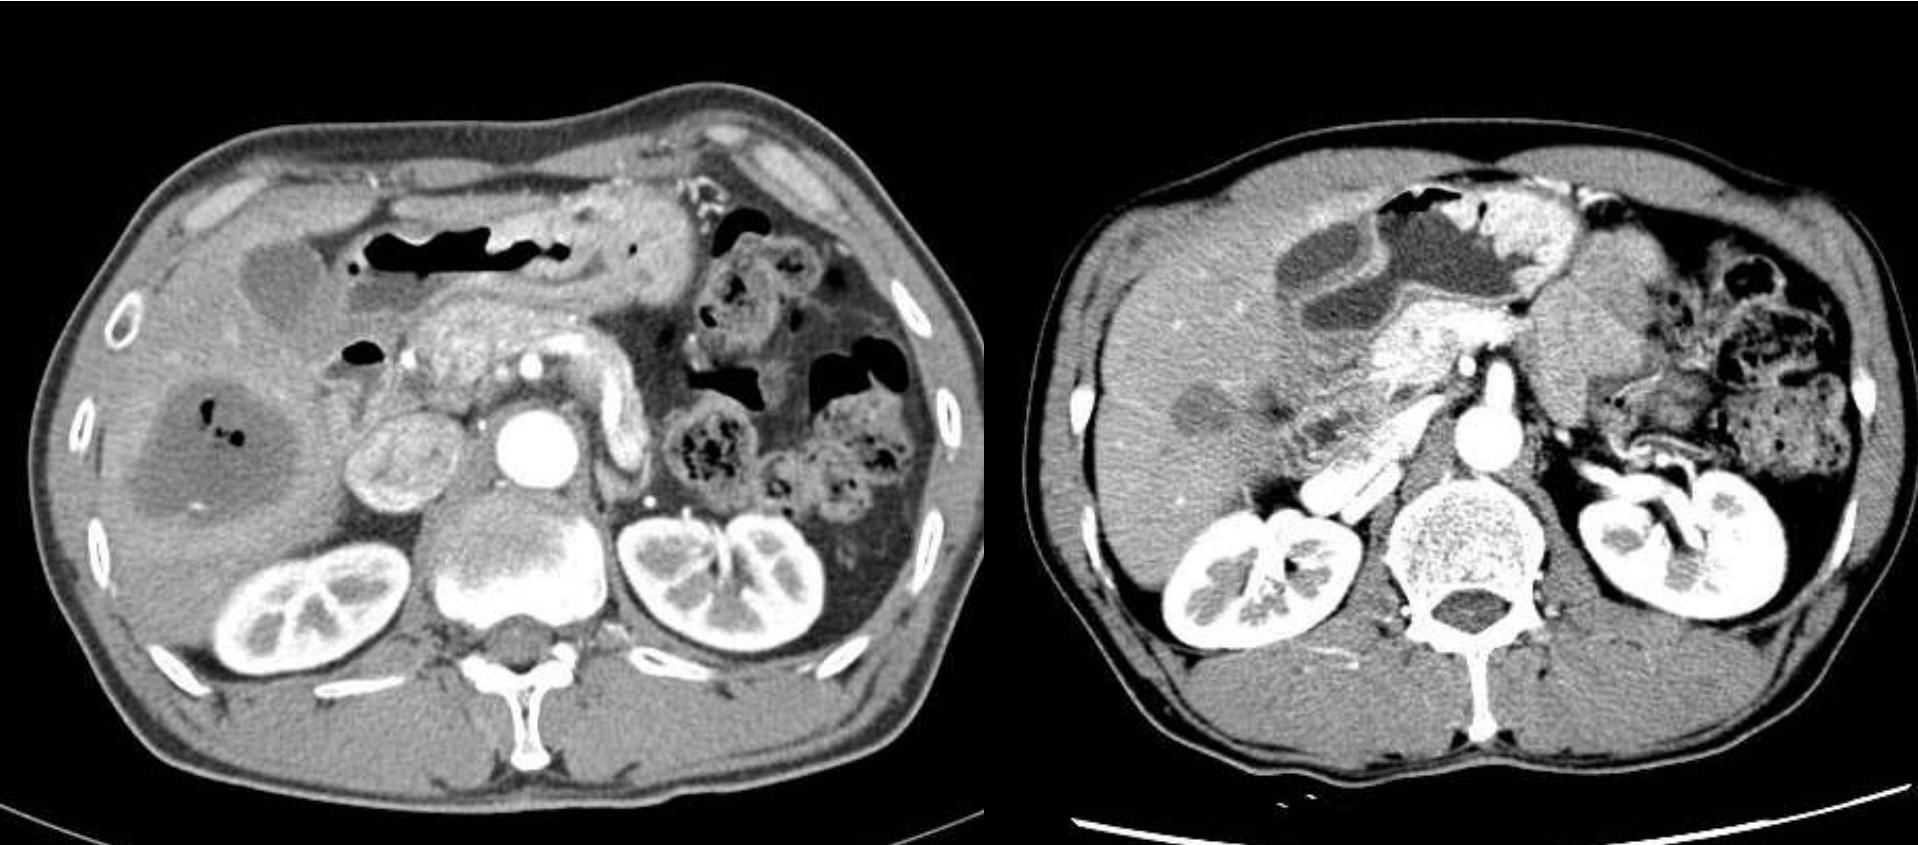

Before DEB-TACE

After DEB-TACE
(100-300 & 300-500)

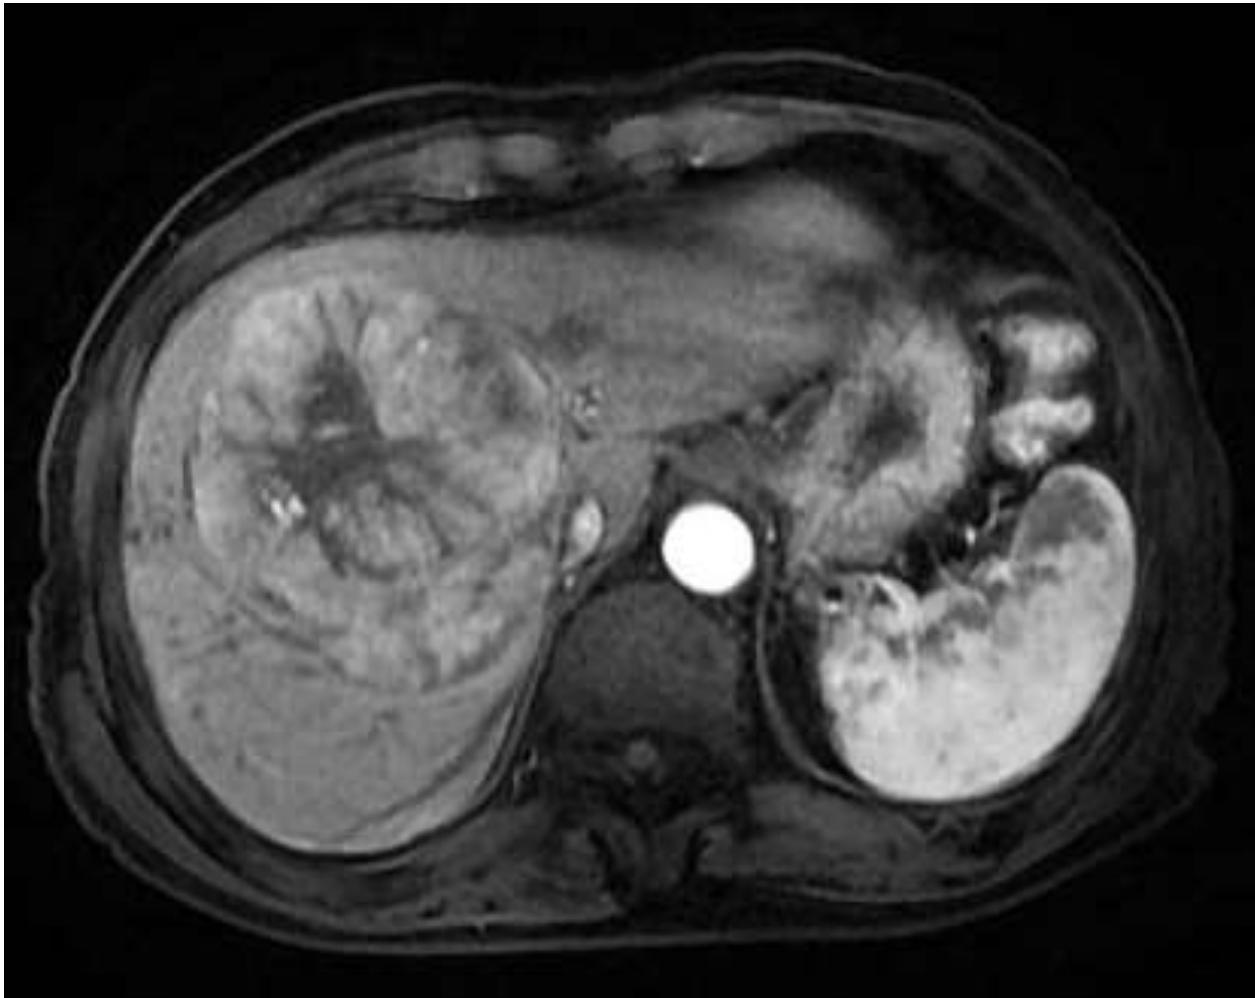

Medium tumor 3cm ~ 7cm

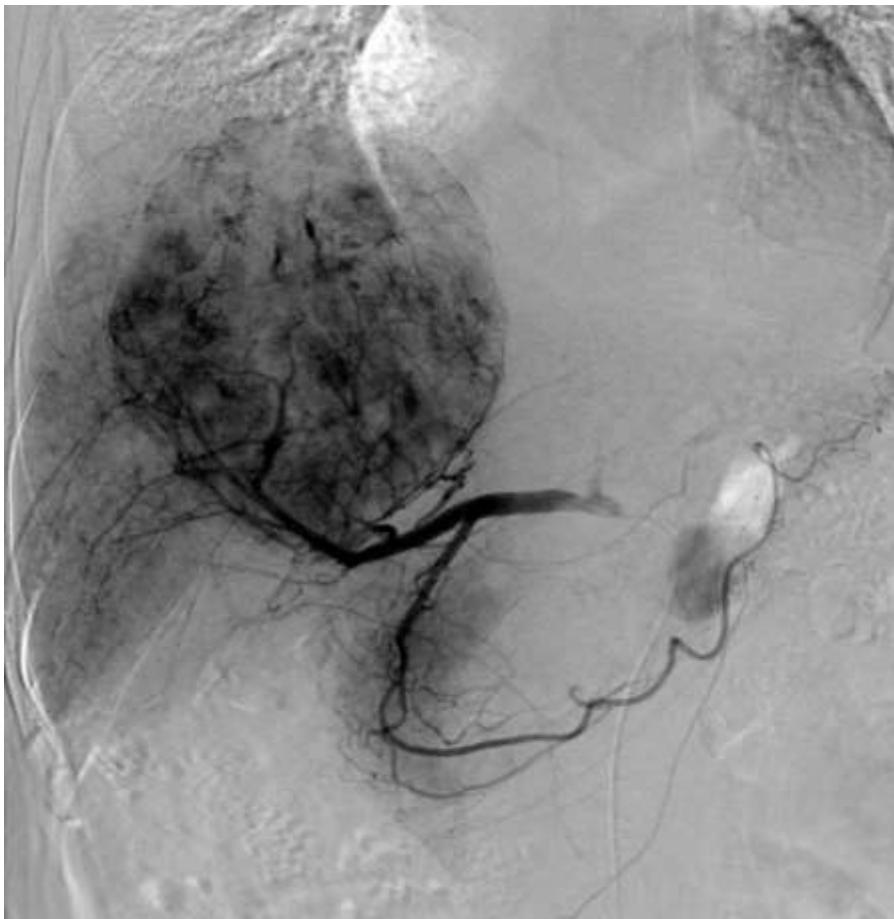

1 month

2.5 Year

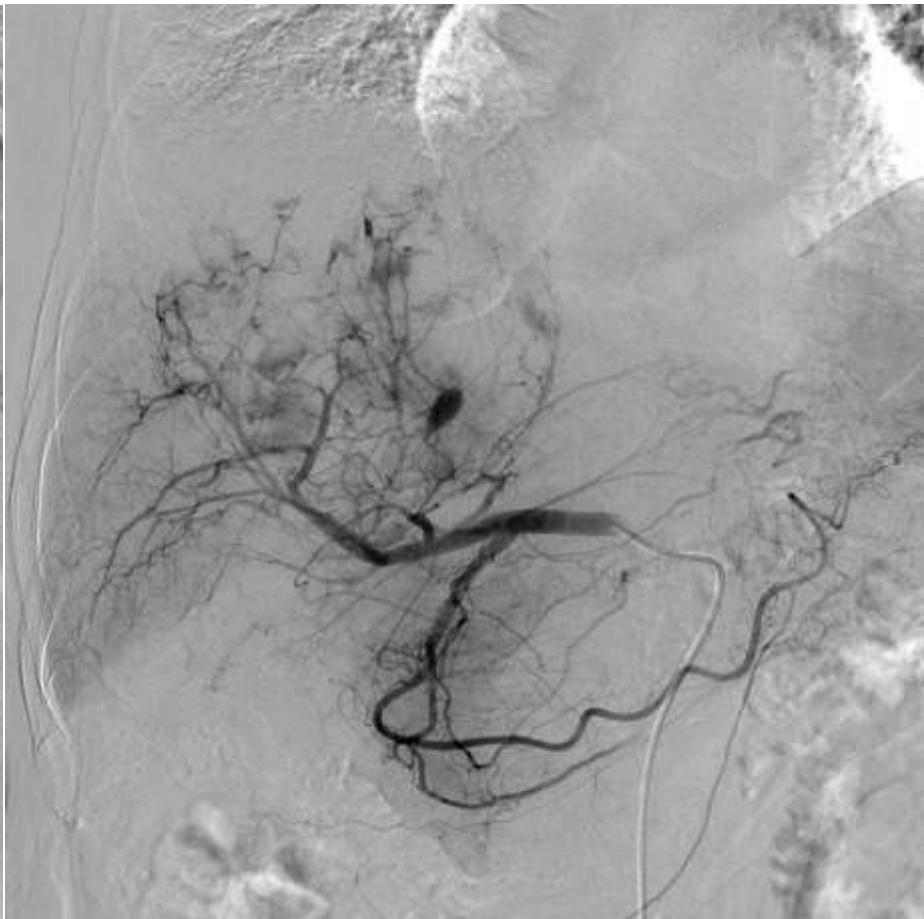

Large tumor \geq 7cm

Large tumor \geq 7cm

Before DEB-TACE

After DEB-TACE
(100-300 & 300-500)

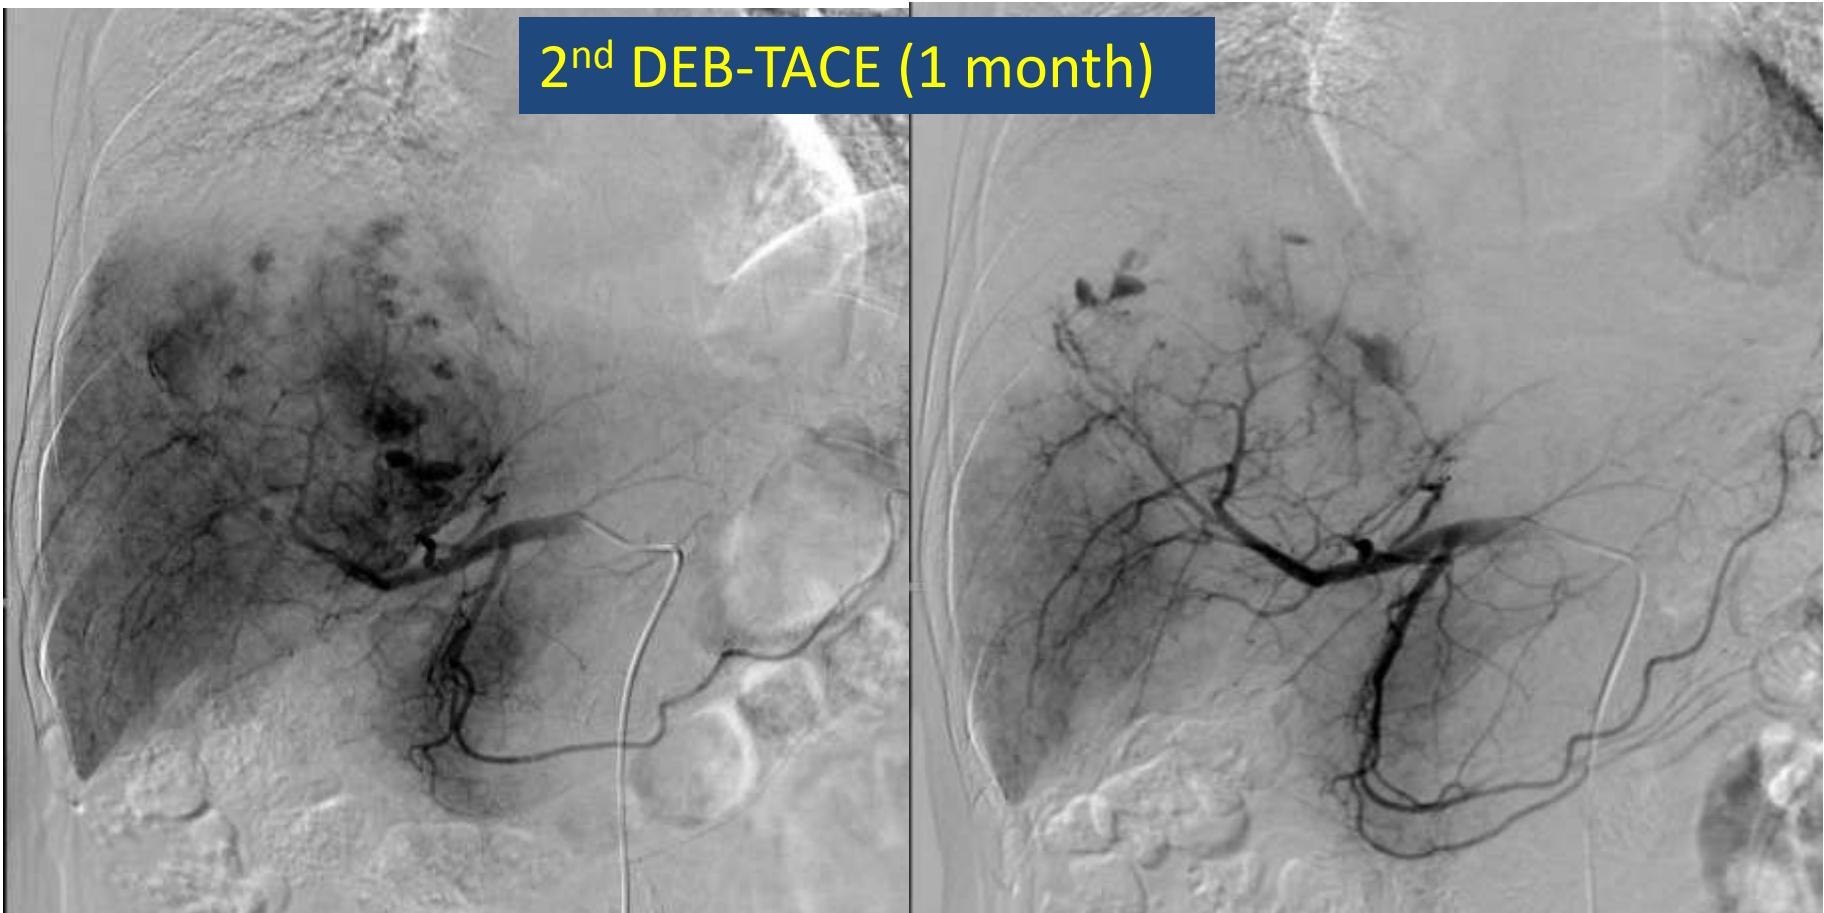

Large tumor \geq 7cm

1 month

Large tumor \geq 7cm

2nd DEB-TACE (1 month)

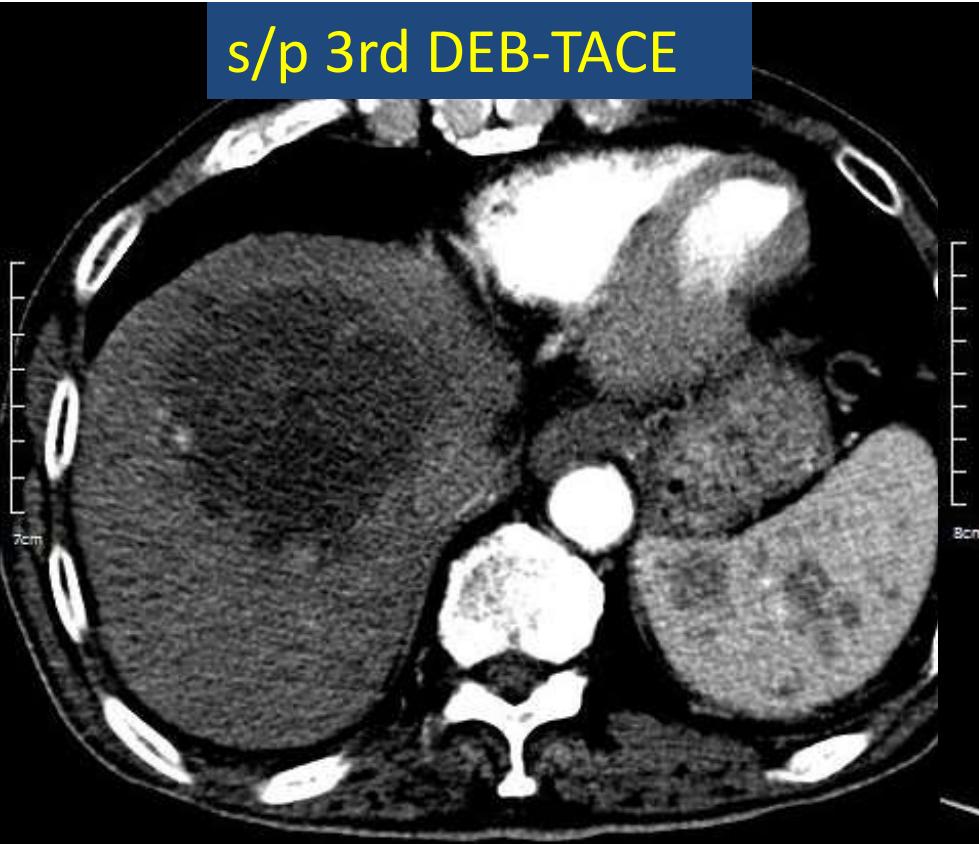

Before DEB-TACE

After DEB-TACE
(100-300 & 300-500)

Large tumor \geq 7cm

s/p 3rd DEB-TACE

s/p 3rd DEB-TACE, 4th cTACE

Conclusion

- Better tumor response ?
- Indication of DC bead ?

- Less pain during TACE
- Less post-embolization syndrome
- Shorter hospitalization period

- Increased complication (biliary, non-target)

Drug-eluting bead: DC Bead™

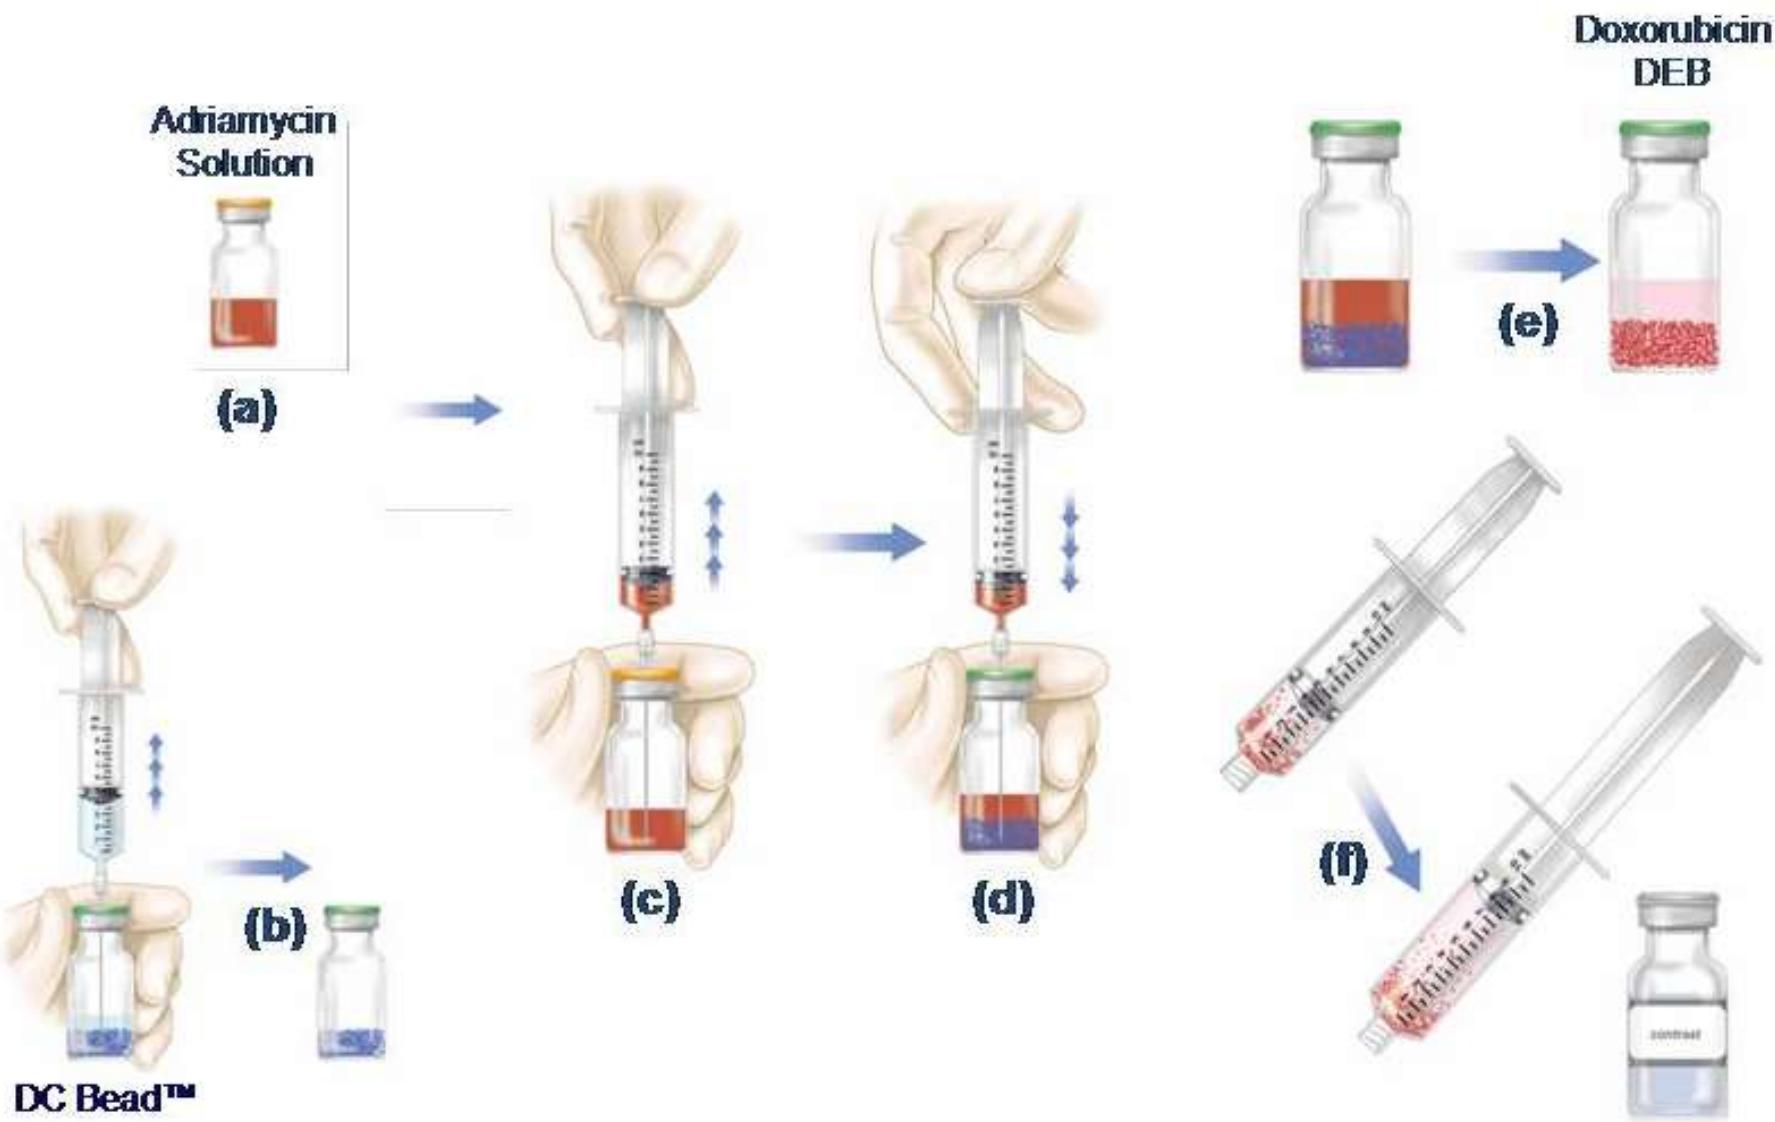

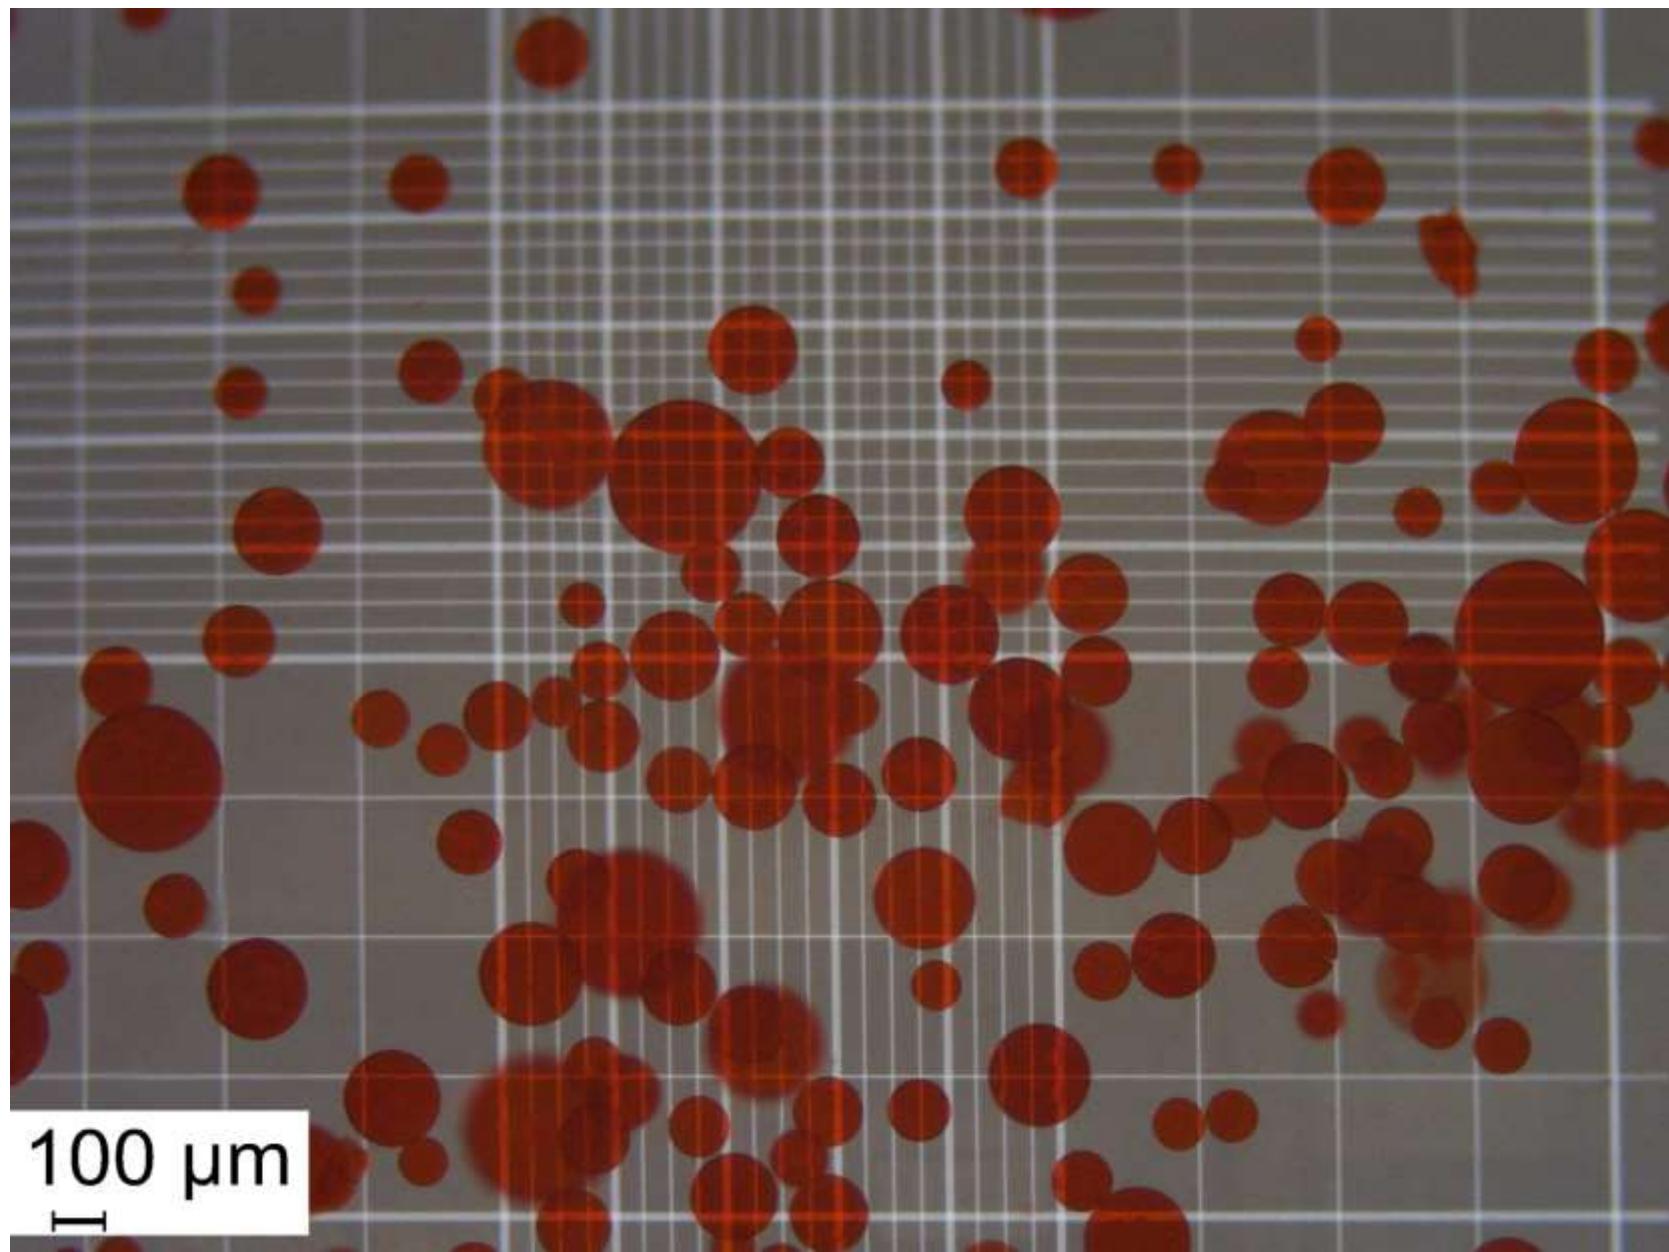

DEB-TACE : Drug-Eluting Bead

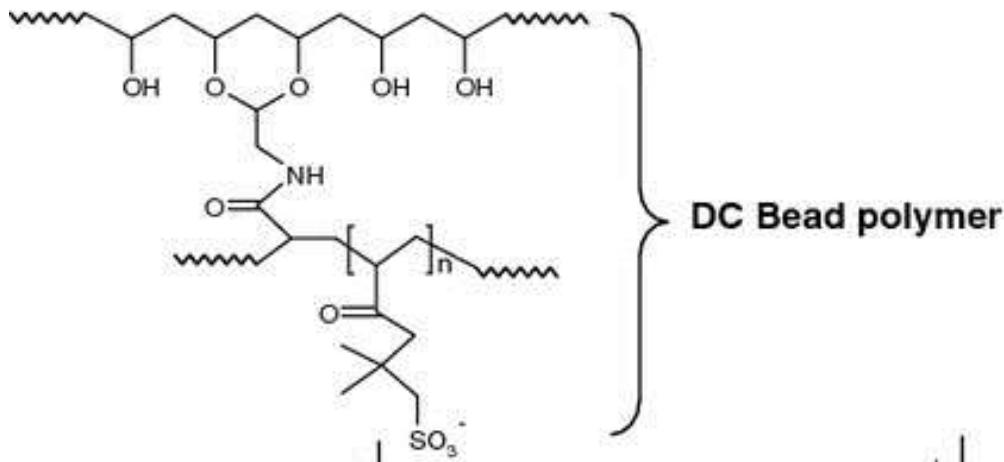

- DC bead® (=LC bead®) :

- 100-300μm, 300-500μm,
- Dox 50-75mg/vial loading, 1~2병/TACE

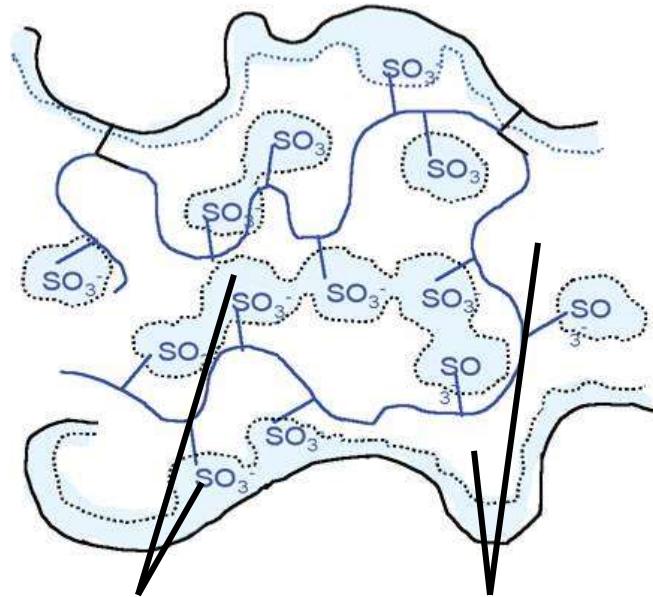

DC Bead: A Drug Delivery Embolization System

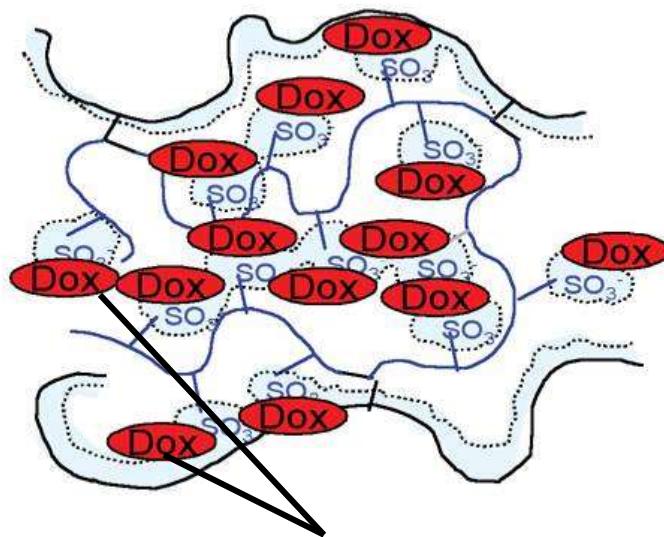

Hydrated Beads

Hydration shell
associated with
PVA and ionic
groups

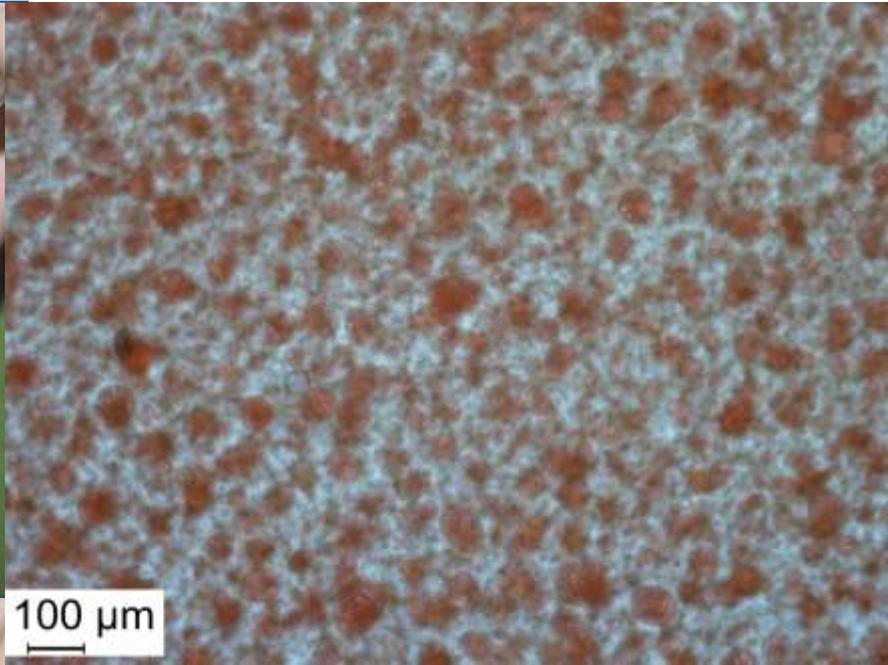

Bulk (non-bound)
water

Loaded Beads

Interaction of doxorubicin with
SO₃ groups displaces water
from the hydration shells

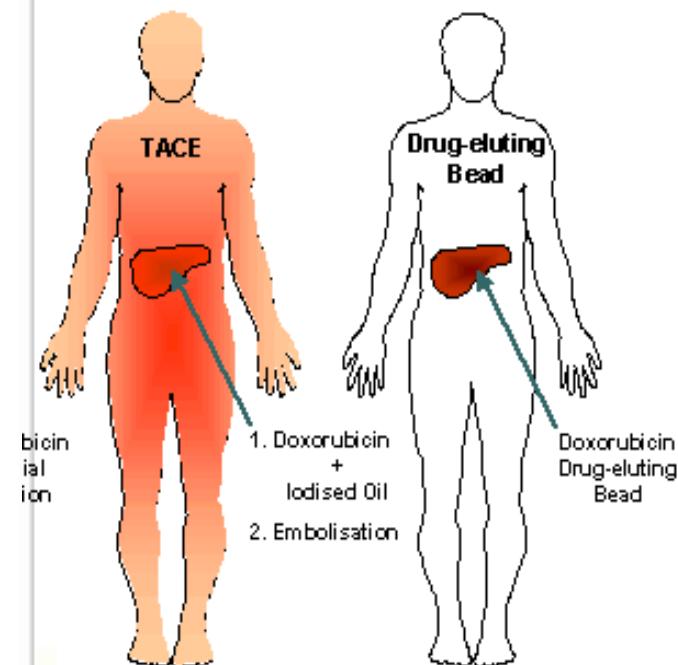

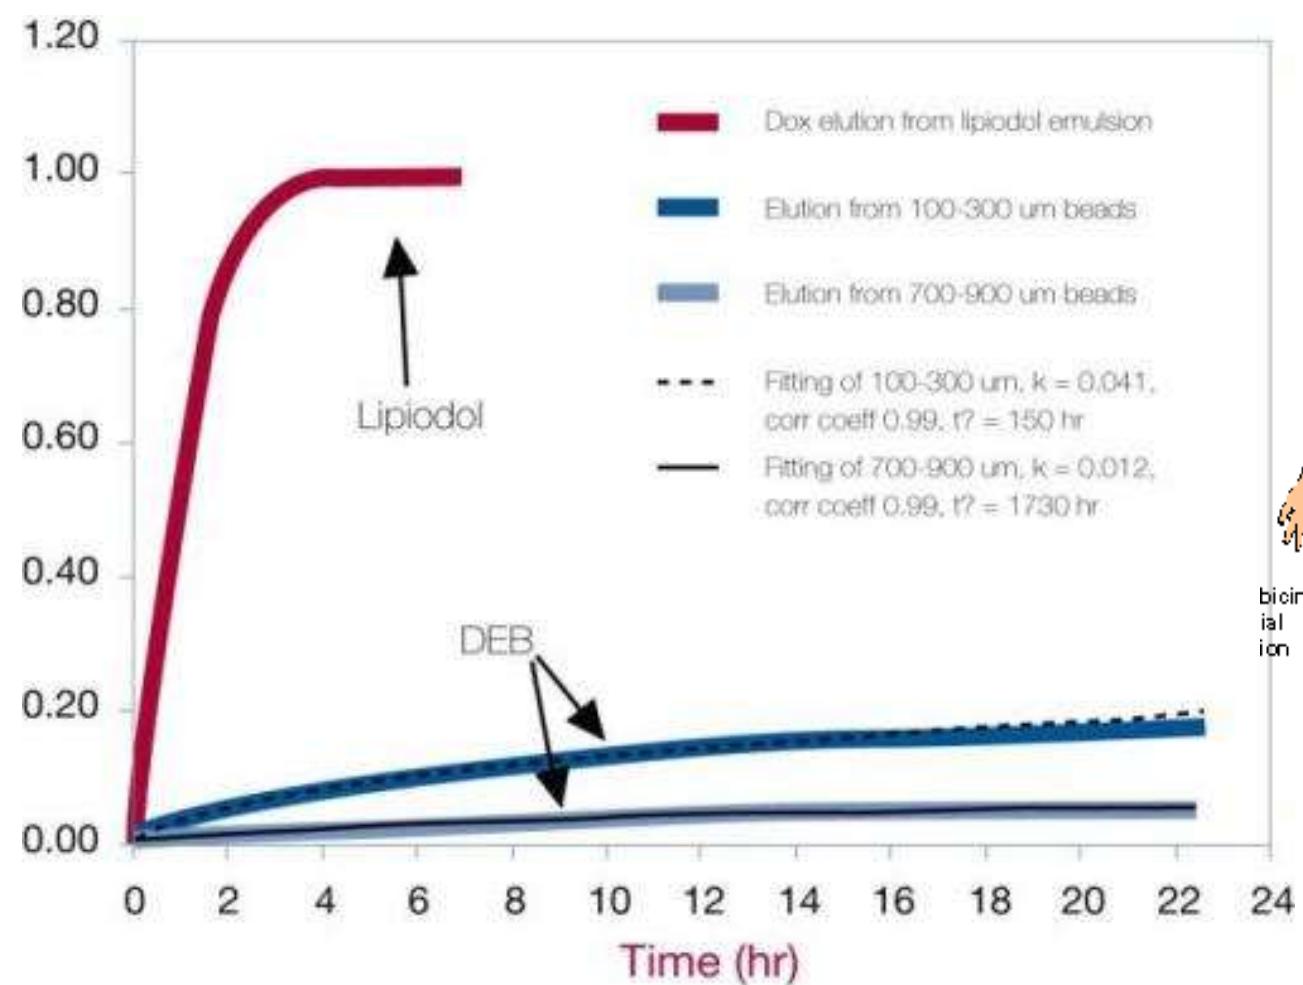

cTACE (Lipiodol + Gelfoam)

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid

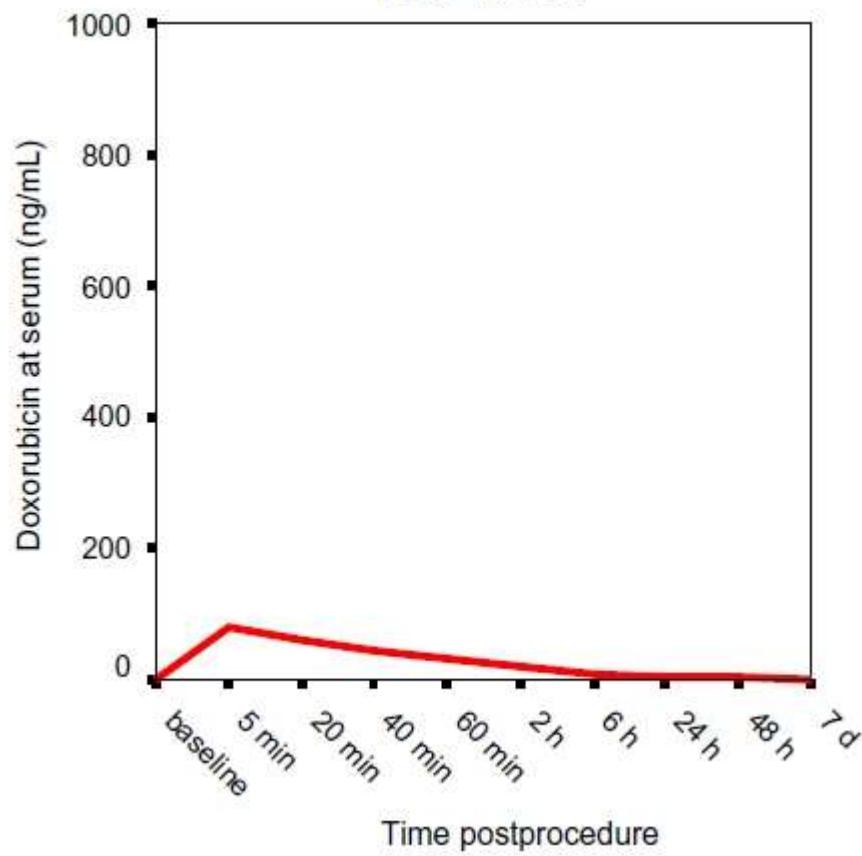

In vitro drug release

Human : Pharmacokinetics

Doxorubicin-Related Side Effects

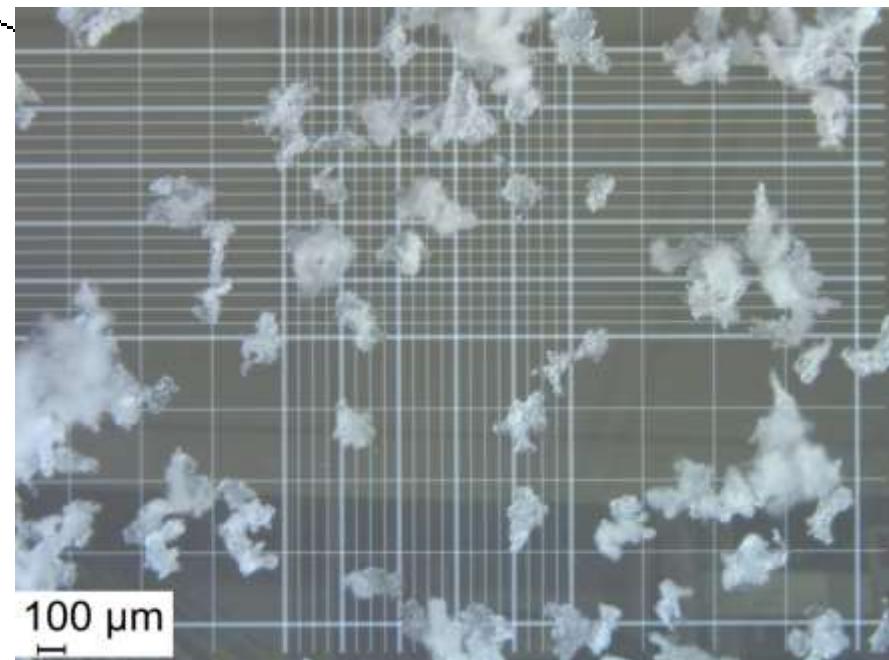

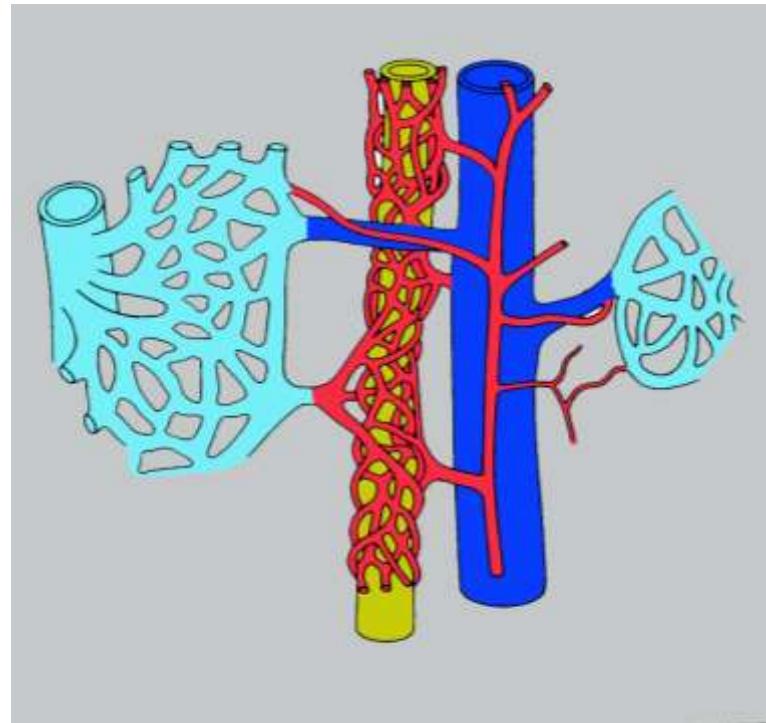

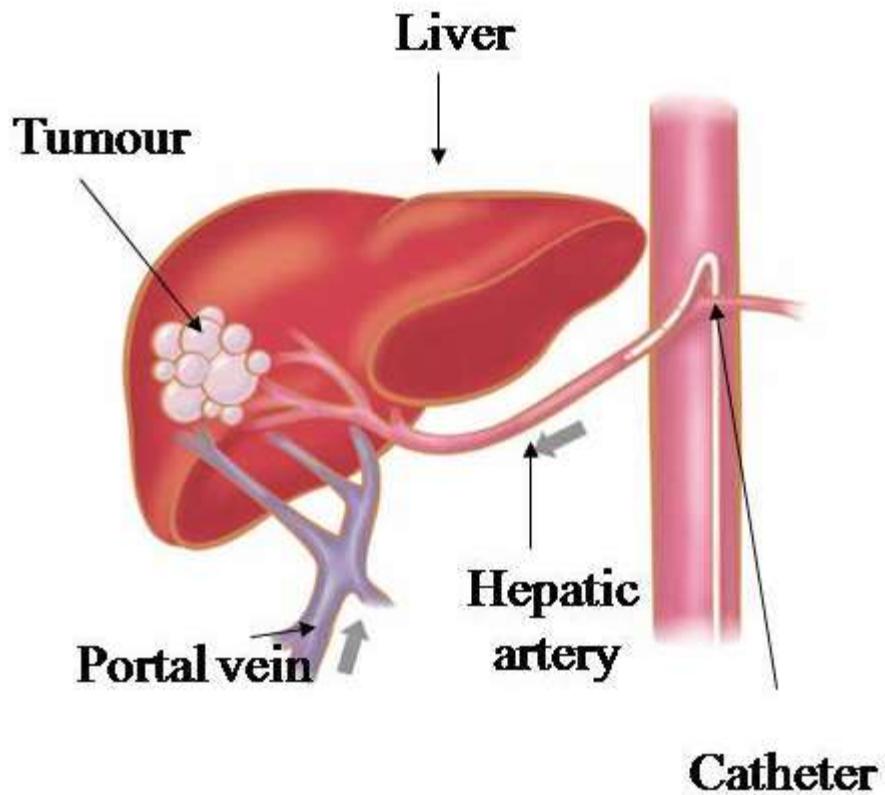

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid
Material	Permanent	Temporary

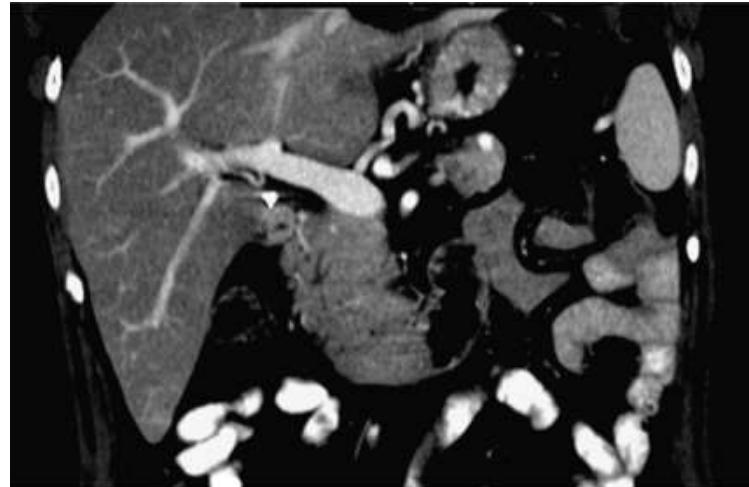

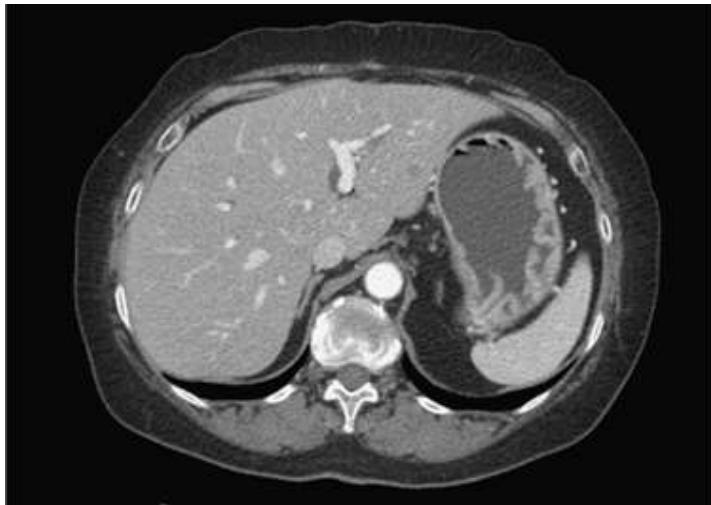

- ✓ Polyvinyl alcohol
- ✓ Contour® (Boston Scientific)
- ✓ Permanent embolic material
- ✓ Bronchial artery embolization (hemoptysis)

- ✓ Liver dual blood supply
- ✓ Bile duct – dominantly fed by peribiliary plexus (artery)
- Hepatic artery occlusion by permanent embolic material
→ biliary complication!!

Liver/biliary injuries following chemoembolisation of endocrine tumours and hepatocellular carcinoma: Lipiodol vs. drug-eluting beads

	NET-group (n = 278)		HCC-group (n = 198)	
	Lipiodol-TACE (n = 152)	DEB-TACE (n = 126)	Lipiodol-TACE (n = 142)	DEB-TACE (n = 56)
<u>Dilated bile duct (n = 48)</u>	10 (6.6)	25 (19.8)	3 (2.1)	10 (17.9)
Lobar (n = 4)				
Sectorial (n = 1)				
Segmental/subsegmental (n = 43)				
Unique (n = 34)/Multiple (n = 14)				
<u>Portal vein narrowing (n = 19)</u>	4 (2.6)	9 (7.1)	2 (1.4)	4 (7.1)
Lobar (n = 1)				
Sectorial (n = 6)				
Segmental/subsegmental (n = 12)				
Unique (n = 15)/Multiple (n = 4)				
<u>Portal vein thrombosis (n = 23)</u>	1 (0.7)	15 (11.9)	2 (1.4)	5 (8.9)
Lobar (n = 0)				
Sectorial (n = 2)				
Segmental/subsegmental (n = 21)				
Unique (n = 21)/Multiple (n = 2)				
<u>Biloma/liver infarct (n = 17)</u>	3 (2)	13 (10.3)	1 (0.7)	0
Mean size, cm (SD): 3.9 (1.9)				
Sessions with at least one liver/biliary injury, n	14 (7.2)	45 (35.7)	6 (4.2)	17 (30.4)

Guiu B et al. J Hepatology 2012;56:609-617

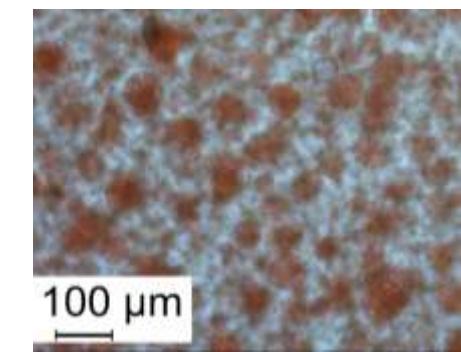

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid
Material	Permanent	Temporary
Size	medium	Small + Large

Size

Gelfoam
particle

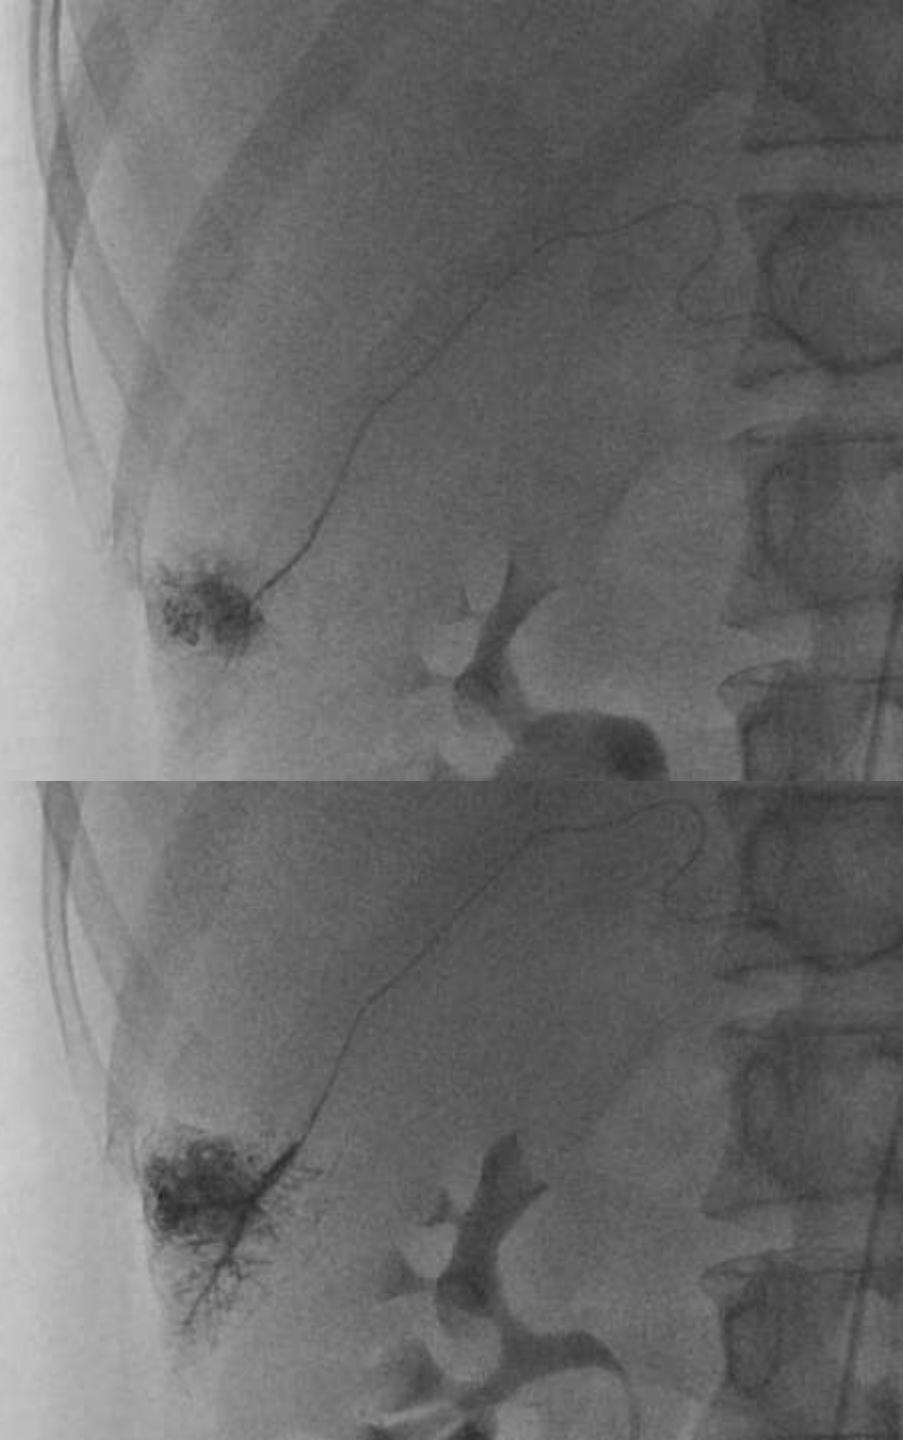

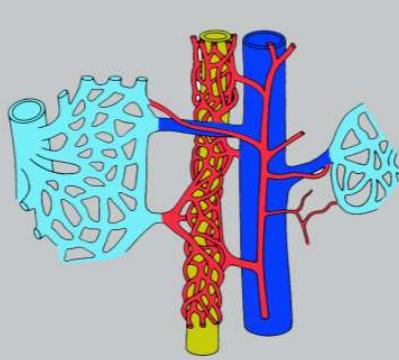

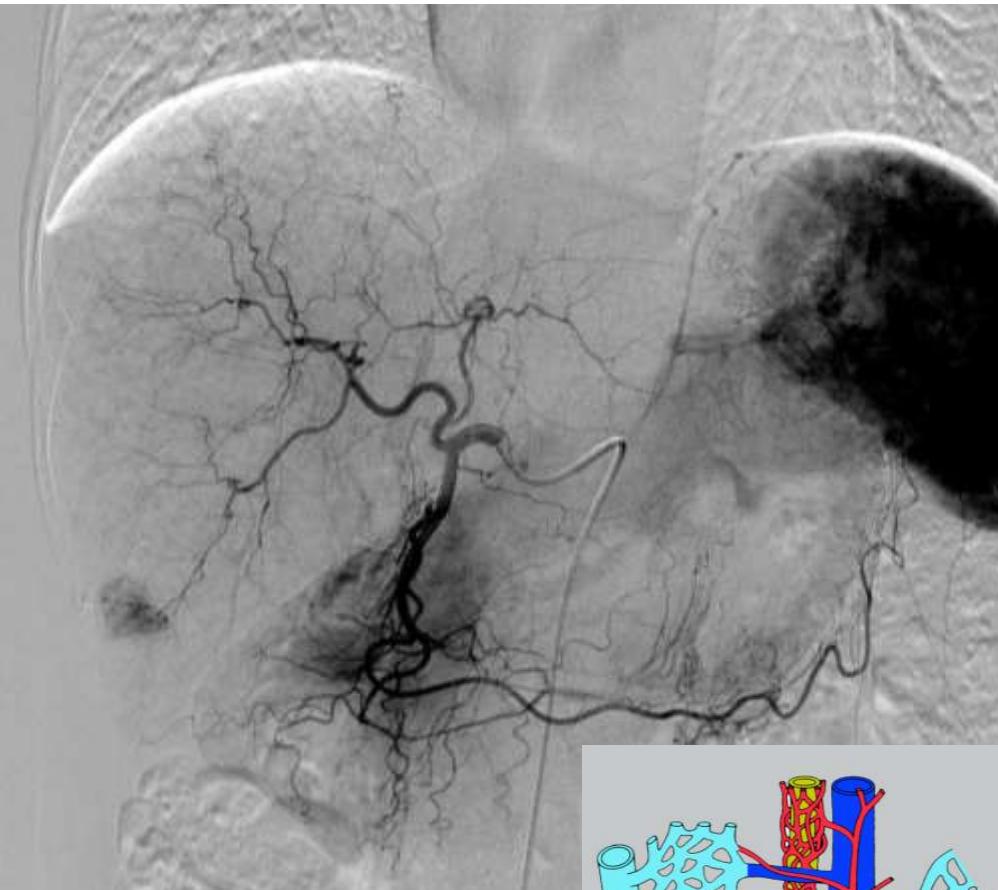

Lipiodol

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid
Material	Permanent	Temporary
Size	medium	Small + Large
Embolized vessel	Artery	Artery + PV

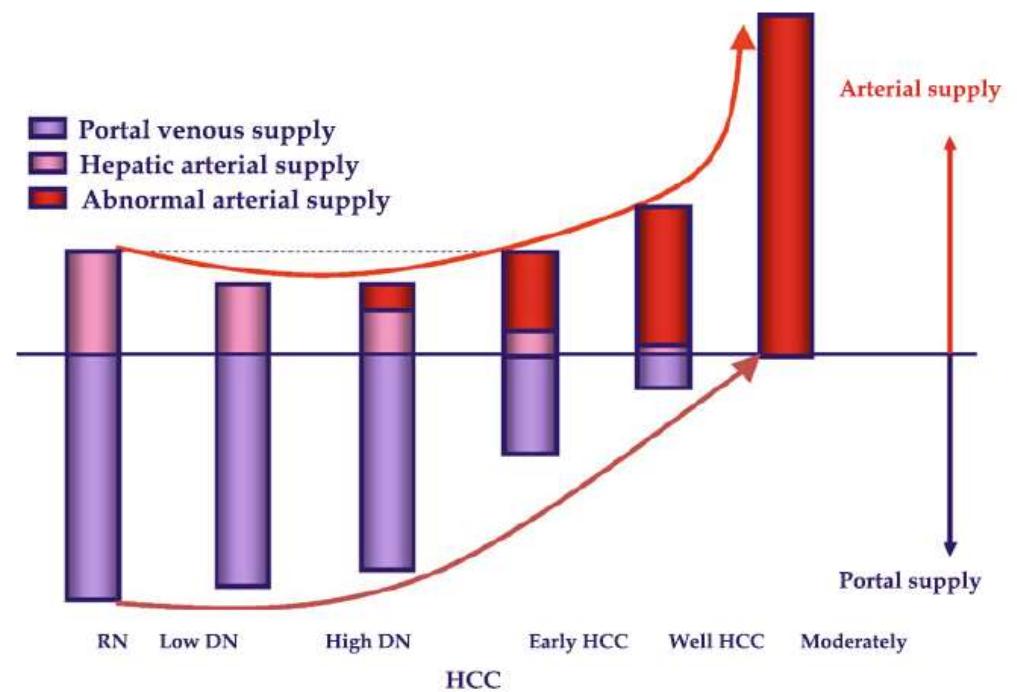

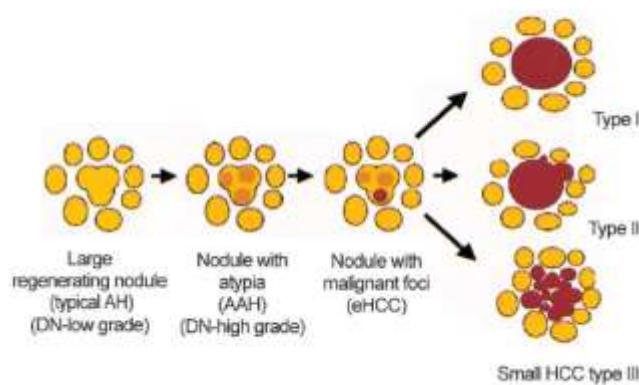

- Embolized Vessel

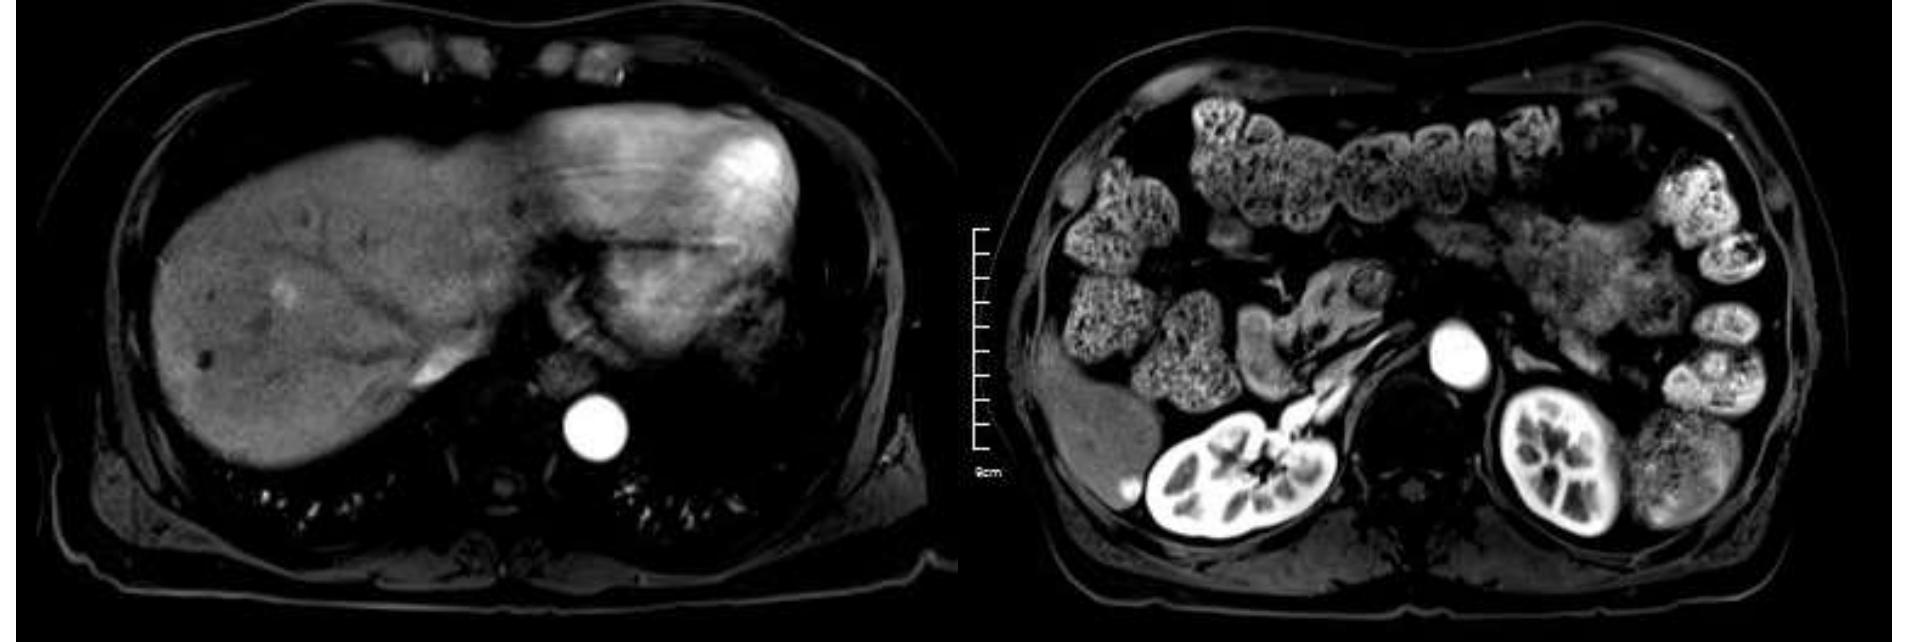

- cTACE : hepatic artery + portal vein
- DEB-TACE : hepatic artery

Blood Supply of HCC

- Multi-step hepatocarcinogenesis

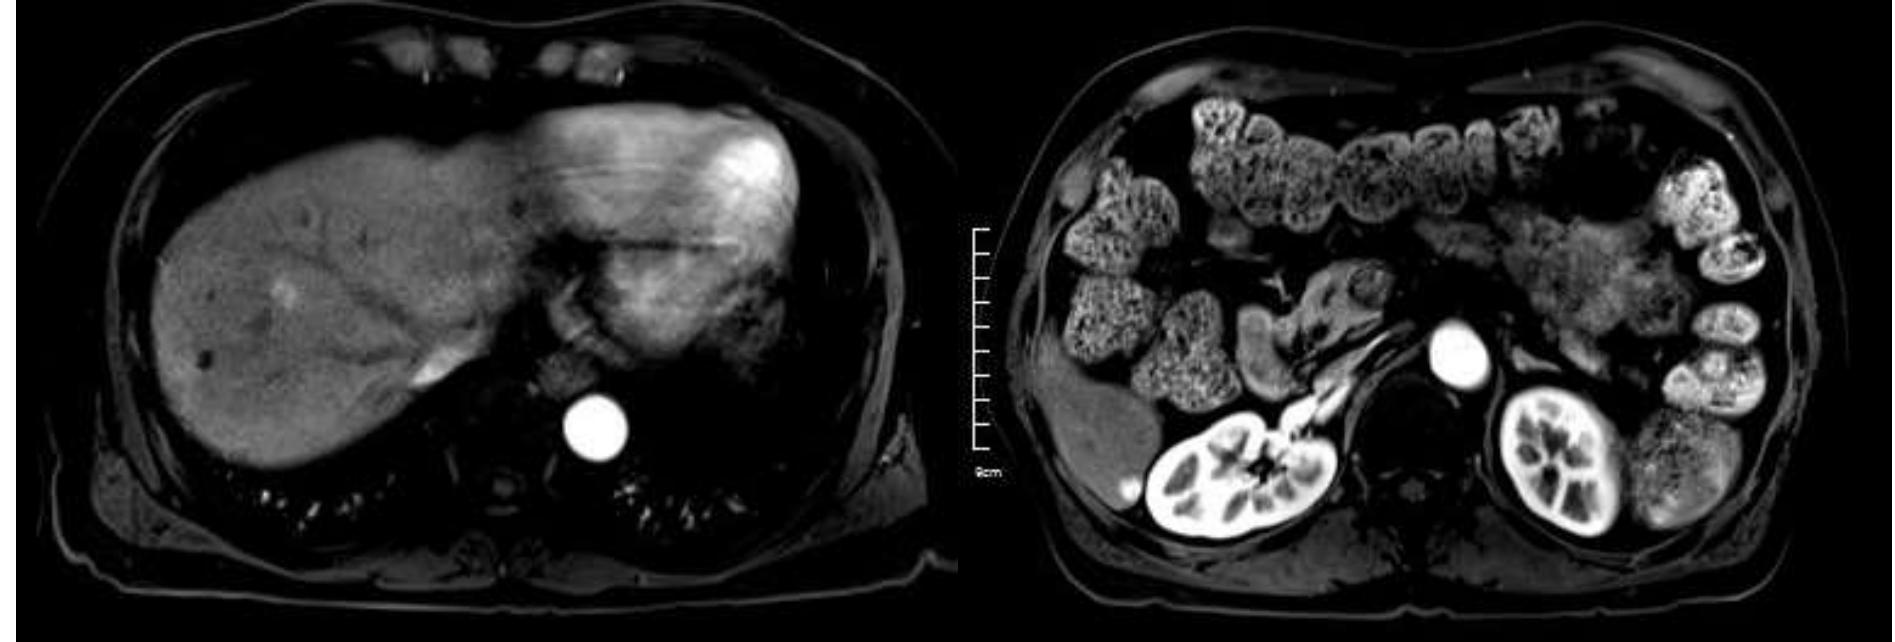

- 61/M, Child-Pugh A5
- Small Two nodules on MR

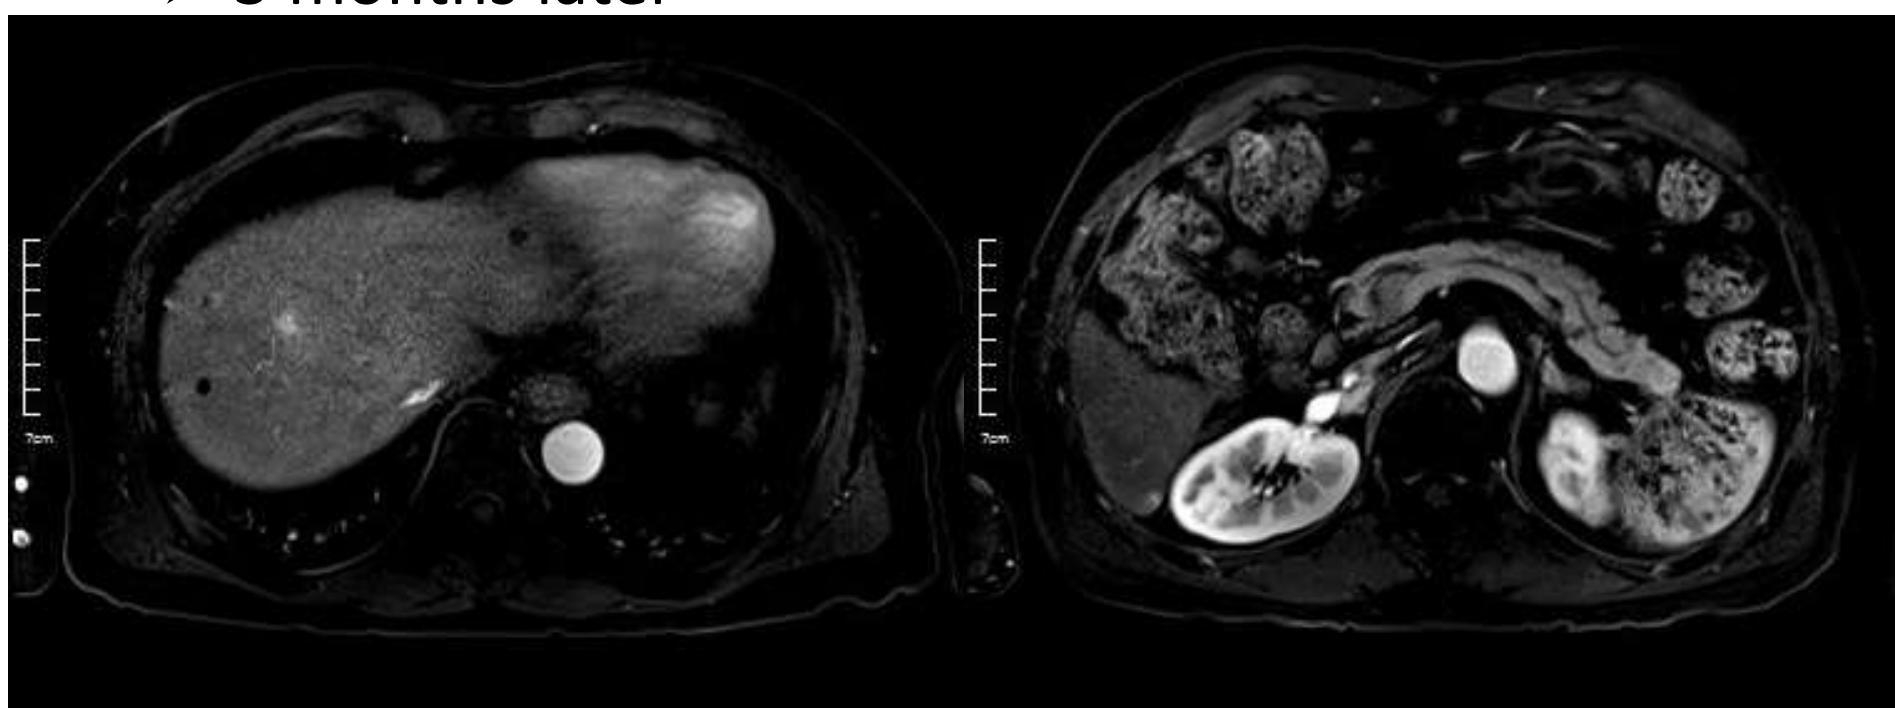

- DC bead 100-300

➤ 3 months later

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid
Material	Permanent	Temporary
Size	medium	Small + Large
Embolized vessel	Artery	Artery + PV
Target vessel	Up to subsegmental	Up to sub-subsegmental

➤ DC bead

- Avoid catheter wedging
- Target artery > microcatheter

➤ Lipiodol

- catheter wedging doesn't matter
- Target artery \geq microcatheter

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	rapid
Material	Permanent	Temporary
Size	medium	Small + Large
Embolized vessel	Artery	Artery + PV
Target vessel	Up to subsegmental	Up to sub-subsegmental
End-point	Near-stasis	Complete stasis

PostEmbolization Syndrome(PES)

- DC bead << Lipiodol

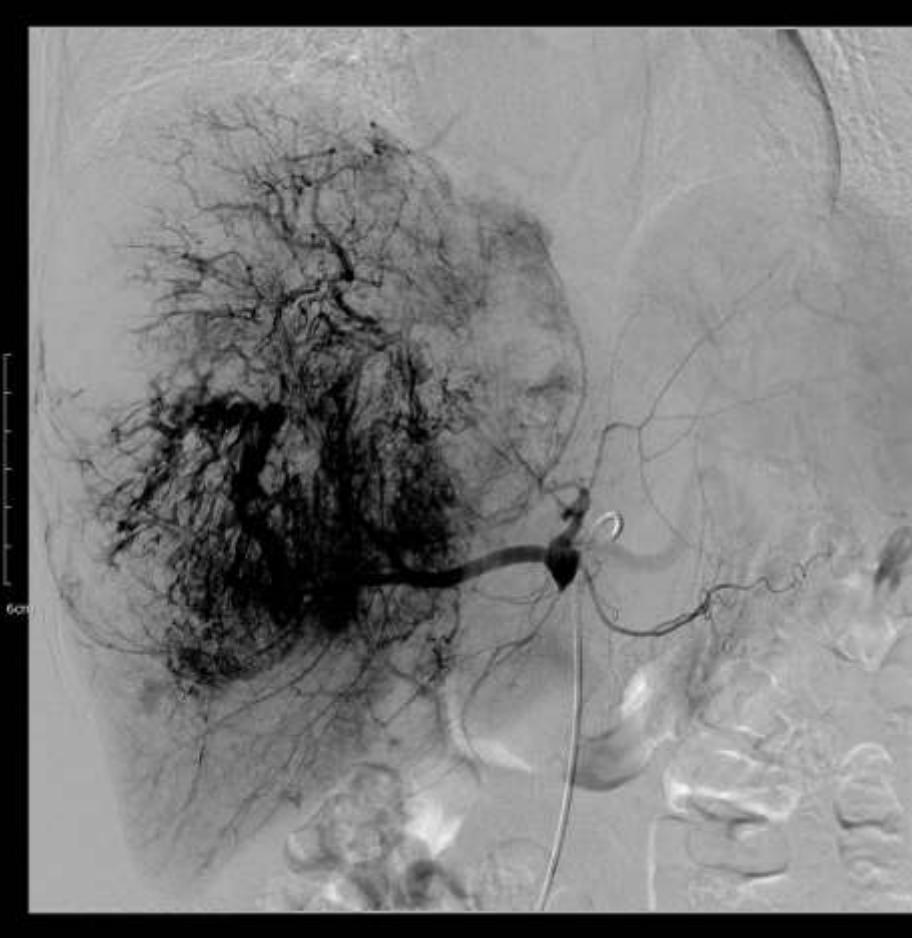

DC Bead vs Lipiodol

	DC bead	Lipiodol + Gelfoam
Drug release	sustained	Rapid
Material	Permanent	Temporary
Size	medium	Small + Large
Embolized vessel	Artery	Artery + PV
Target vessel	Up to subsegmental	Up to sub- subsegmental
End-point	Near-stasis	Complete stasis
Dose limit	2 vial	Lipiodol (15cc) Gelfoam (no limit)

Large tumor

Large tumor

Before DEB-TACE

After DEB-TACE
(300-500 & 500-700)

Large tumor

2 weeks

Tumor response?

➤ DEB-TACE ≈ cTACE

- ✓ -->Non-randomized study.
- ✓ -->Further study is needed.

DC Bead Indication

➤ 보험 기준

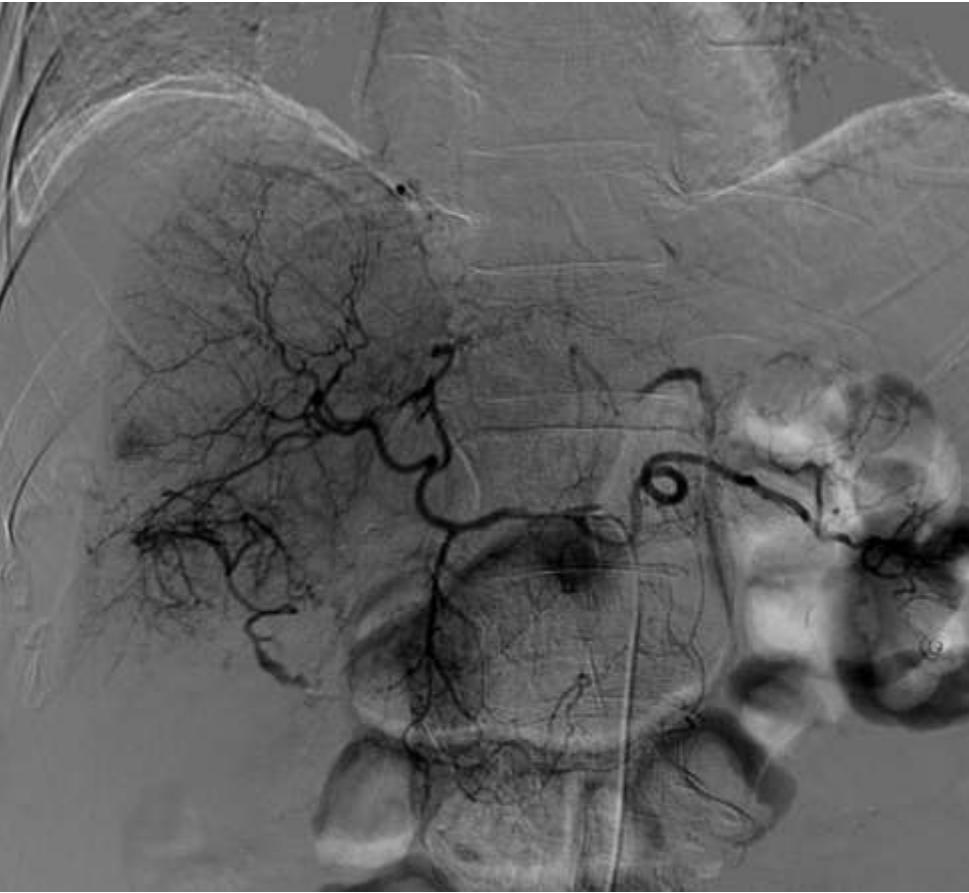

- Tumor size \leq 10cm
- Child-Pugh B
- NOT infiltrative
- Vascular invasion (-)
- Massive AP shunt (-)
- Biloenteric anastomosis (-)

➤ Relative Contraindication

- Progression after cTACE
- Hepatic artery injury by repeated TACE

78/M, HCC rupture at initial presentation

1st TACE : Lipiodol

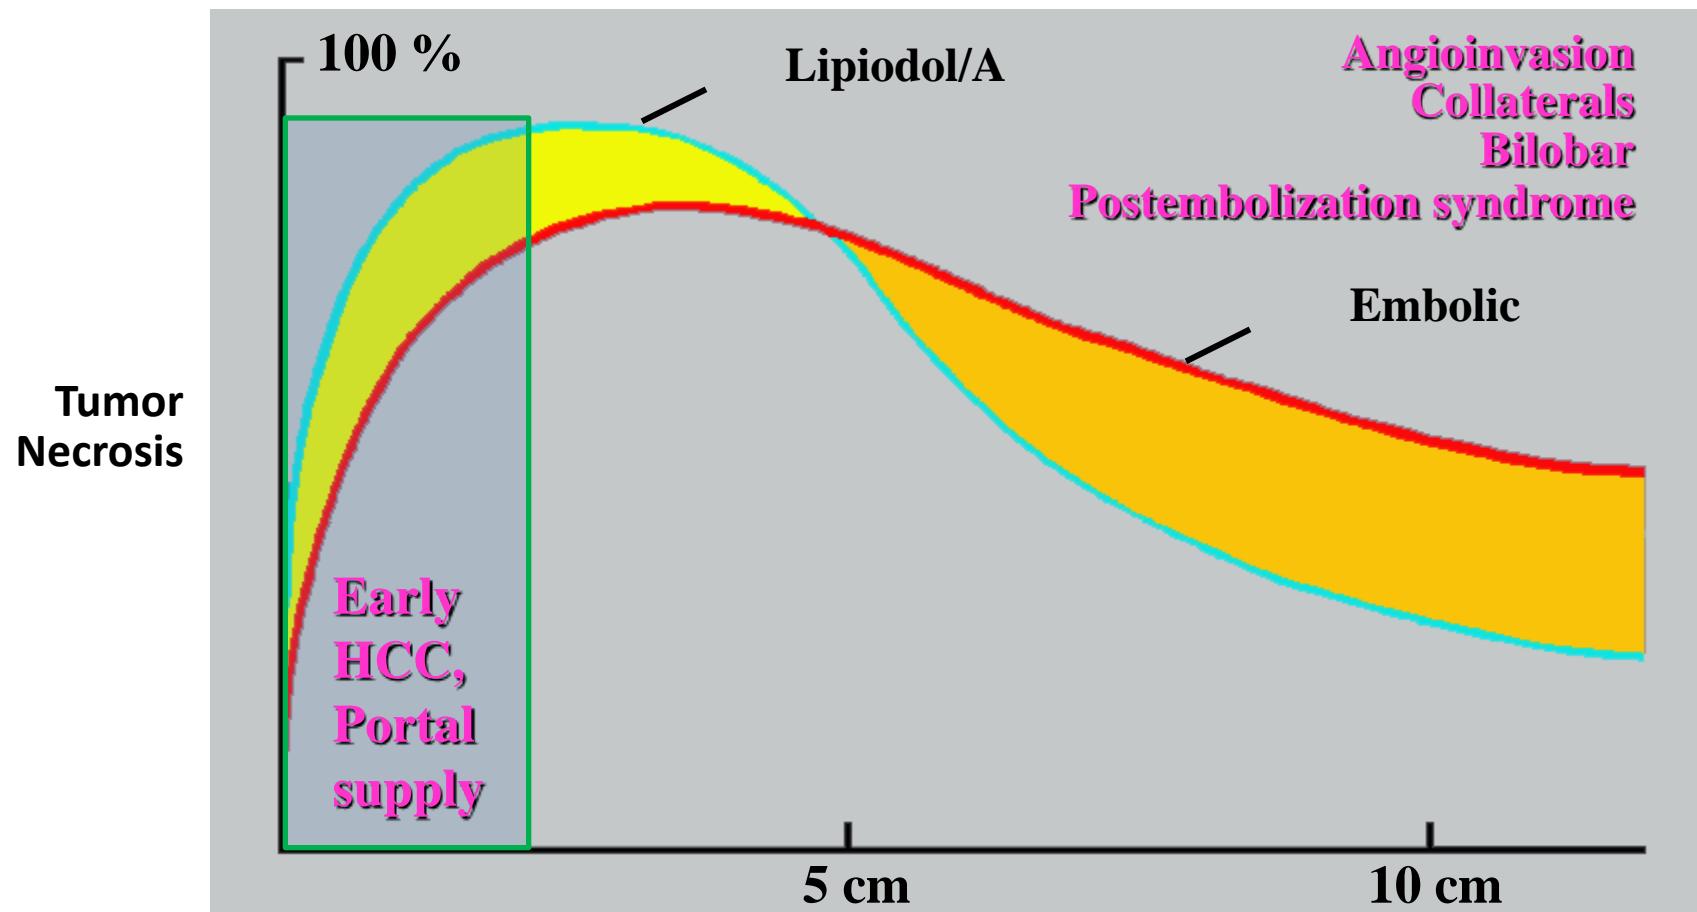

2nd TACE : Rt HA occlusion

DC bead : can not reach tumor via fine collateral vessel,
may cause biliary Cx

Courtesy of Kim JH

Cytotoxic Effect vs Ischemic Effect

DC bead vs cTACE

	Small <3cm	Medium 3 – 7cm	Large >7cm
	cytotoxic	Cytotoxic/Ischemic	Ischemic
Cytotoxic effect	Lipiodol \geq DC bead	DC bead $>$ Lipiodol	DC bead $>$ Lipiodol
Ischemic effect	DC bead $>$ Gelfoam	DC bead \geq Gelfoam	Gelfoam $>$ DC bead
DC bead indication	Not recommend	Better outcome Less PES	Less PES

Most Important Factor

Thank you for your attention !
